APPROVAL SIGNATURE

SPECIFICATION (DRAFT)

FOR

Toshiba Matsushita Display Technology TFT-LCD MODULE

LTM024P339

SPECIFICATION No. : _____
NL-LTM024P339-06

DATE OF ISSUE 2003-06-09

(DATE OF EXPIRY : 2006-10-30)

Mobile-Use Marketing & Engineering Dept.
Mobile-Use LCD Div.
Toshiba Matsushita Display Technology Co.,Ltd.
1-9-2, Hatara-cho, Fukaya-shi, Saitama, 366-0032, JAPAN

Revision History

Date	Sheet (New)	Item	Old	New	Reason
2002-10-30	20	Reference Drive Circuit			Change
	21	List of External Components for Reference Driving Circuit			Addition
	22,23	Timing Chart (For LCD controller settings)			Addition
2003-05-29	23	Timing Chart (For LCD controller settings)			Decision
	21	List of External Components for Reference Driving Circuit	C316 ; 330uF/6.3V VR300 ; 200	C316 ; 330pF/6.3V VR300 ; 200K	Change the best value
2003-06-09	09	Dimensional Outline		(a)-(b)= Less than +/-0.5[mm]	Addition
	16	Interface Terminal		1)LCD-FPC z direction size =0.12+/-0.05[mm], 2)T/P-FPC z direction size =0.2+/-0.05[mm], 3)LED-FPC z direction size =0.2+/-0.05[mm]	Addition
	19	Touch Panel's characteristics		1)Resistance X/Y direction ; X=650+/-300[ohm] , Y=600+/-300[ohm] 2)The variation with temperature ; Less than 0.5%/°C 3)Flatness=Less than +/- 0.15[mm]	Addition
	25	Quality		Inspection area should be within viewing area.	Change
	26	Display Quality(LCD)		IAC and TMD will discuss it when inconspicuous defect(flicker, crosstalk, Newton ring etc)happen.	Addition

Caution and Handling Precaution

For your end user's safety, it is strongly advised that the items with " * " should be included in the instruction manual of the system which may be issued by your organization.

For Safety

Warning

- (1) Toshiba matsushita display technology co.,ltd.'s Standard LCD modules have not been customized for operation in extreme environments or for use in applications where performance failures could be life-threatening or otherwise catastrophic.
Since they must never be installed in aircraft navigation control systems (such as, but not limited to Traffic Collision System and Air traffic Indicator), in military defense or weapons systems, in critical industrial process-control systems (e.g., those involved in the production of nuclear energy), or in critical medical device or patient life-support systems.
- (2) DISCONNECT POWER SUPPLY before handling LCD module.
DO NOT TOUCH the parts inside LCD module in order to prevent electric shock, because high voltage is supplied to these parts from the inverter unit while power supply is turned on.

Caution

- (1) DO NOT DISASSEMBLE OR MODIFY the module.
Sensitive parts inside LCD module may be damaged, and dusts or scratches may mar the displays.
Toshiba matsushita display technology co.,ltd. does not warrant the modules, if customer disassembled or modified them.
- * (2) DO NOT INGEST liquid crystal material, DO NOT INHALE this material, and DO NOT PERMIT this material to contact the skin, if LCD panel is broken and liquid crystal material spills out.
In the event of inadvertent contact, immediately rinse the mouth or eyes with adequate water. If this material should inadvertently contact the skin or clothing, wash immediately with alcohol and then rinse thoroughly with water.
- * (3) BE CAREFUL WITH CHIPS OF GLASS that may cause injuring fingers or skin, when the glass is broken.
- (4) DO NOT EXCEED the absolute maximum rating values under the worst probable conditions caused by the supply voltage variation, input voltage variation, variation in parts' constants, ambient temperature, etc., otherwise LCD module may be damaged.
- (5) Suitable protection circuit should be applied for each system design.
It may cause overheat and/or burning if dusts or metal particles are on the PCBs in the LCD module.
- (6) Examine the power supply circuit protective device at the time of the LCD module failure according to the operation condition of your set. This LCD module has not any fuse.
Therefore, the case where there is no suitable power supply protection equipment, it is possible that the circuit of LCD module or your set is damaged by Over-current at the time of failure of a circuit.
- (7) Always comply with all applicable environmental regulations, when disposing of LCD.

For Designing the System

- (1) Make sure to design the enclosure that bending/twisting forces are not applied to LCD module during and after the installation into the system.
Make certain clearance between LCD module and system for not press I/F cable, FPC and pipe light guide etc..
- (2) Power supply lines should be designed as follows.
Power(DVDD) supplies should always be turned on before the input signals are supplied to LCD module, and the input signals should be disconnected before power supplies are turned off.
If the sequence does not satisfy specified conditions, it may cause miss-operation of the panel.
Refer to "2.4.2 Sequence of Power Supplies and Signals" for the detailed specification.
- (3) In case of severe environmental condition like outdoor usage, a proper transparent protective cover(lens) over LCD module is recommended to apply in order to prevent scratches, and invasion of dust, water, etc., from the system's window onto LCD module.
Ultra-violet ray cut filter is recommended to apply onto LCD module for outdoor operation. Strong ultra-violet ray may cause damage the panel.
- (4) Design the system not to display same pattern for a long time in order to prevent image sticking on the panel. Note that incorrect sequence of power supplies and input signals may cause the sticking on the panel, too.

For Installation in Assembly

- (1) The C-MOS LSIs (COG; Chip on glass) used in LCD module are very sensitive to ESD (Electro-static Discharge). Ambient humidity of working area is recommended to be higher than 50%(RH).
Person handling LCD modules should be grounded with wrist band. Tools like soldering iron and screw driver, and working benches should be grounded.
The grounding should be done through a resistor of 0.5-1MΩ in order to prevent spark of ESD.
- (2) When remove protection film from LCD panel, peel off the film slowly (more than three seconds) from the edge of the panel, using a soft-pointed tweezers covered by teflon or adherent tape.
- (3) Reduce dust level in working area. Especially the level of metal particle should be decreased.
Use finger stalls or soft and dust-free gloves in order to keep clean appearance of LCD module when handled for incoming inspection and assembly.
- (4) When LCD panel becomes dirty, wipe off the panel surface softly with absorbent cotton or another soft cloth.
If the dirt can not be wiped off, absorbent cotton wetted a little with alcohol can be used for wiping the panel.
Be careful not to spill this solvent into the inside of LCD module. Driver Ics and PCB area used inside LCD module may be damaged by the solvent.
- (5) AVOID THE CONDENSATION OF WATER
Wipe off a spot or spots of water or mist and chemicals of mist on LCD panel softly with absorbent cotton or another cloth as soon as possible if happened, otherwise discoloration or stain may be caused. If water invade into LCD module, it may cause LCD module damages.
- (6) Do not expose LCD module to the gas (which is not normally contained in the atmosphere), it may cause mis-operation or defects.
- (7) DO NOT APPLY MECHANICAL FORCES.
Do not bend or twist LCD module even momentary when LCD module is installed an enclosure of the system. Bending or twisting LCD module may cause its damages.
Make sure to design the enclosure that bending/twisting forces are not applied to LCD module when it is installed in the system.
Refrain from strong mechanical shock like dropping from the working bench or knocking against hard object.
These may cause glass of the panel crack, damage of FL or other mis-operation.
- (8) Refrain from excessive force like pushing the surface of LCD panel. This may cause damage of the panel or electrical parts.
- (9) Do not put heavy object such as tools, books, etc., and do not pile up LCD modules.
Be careful not to touch surface of the lightguide with any hard and sharp object. The lightguide is so soft that it can easily scratched, even the protect film covers it.
- (10) When inserting or disconnecting the connectors to LCD module, be sure not to apply force against FPC, otherwise internal connection of Glass and FPC may be damaged.
Do not fasten screws while putting cables like those for interface or FL between LCD module and the enclosure.
Make sure to insert the module FL connector to the inverter connector in correct position.
If incorrect, this may cause smoke or burn of electrical parts by high voltage of FL circuit.
- (11) Be careful not to pull the frontlight FL cables of the backlight in order to avoid mechanical damage in FL lamp and soldering area. Be careful not to pull or not to hurt the FPC (Flexible Printed Circuit) cables.
- (12) Power supplies should always be turned off in assembling process.
Do not connect or disconnect the power cables and connectors with power applied to LCD module. This may cause damage of module circuit.
The signal should be applied after power are turned on. And the signal should be removed before power supplies are turned off. (Refer to "For Designing The System"(2)).

- (13) The life of CCFL becomes shorter than MTBF indicated by the specifications when ambient temperature is lower than 25°C. (It even reaches to 1/10 to 1/20 in 0 °C.)

For Transportation and Storage

- (1) Do not store LCD module in high temperature, especially in high humidity for a long time (approximately more than one month).
It is recommended to store LCD module where the temperature is in the range of 0 to 35 °C and the relative humidity is lower than 70%.
- (2) Store LCD module without exposure to direct sunlight or fluorescent lamps in order to prevent the module from strong ultra violet ray.
- (3) Avoid condensation of water on LCD module, otherwise it may cause mis-operation or defects. Keep away LCD module from such ambient.
- (4) In case of transportation or storage after opening the original packing, LCD module are recommended to be repacked into the original packaging with the same method, especially with same kind of desiccant.

1. Scope

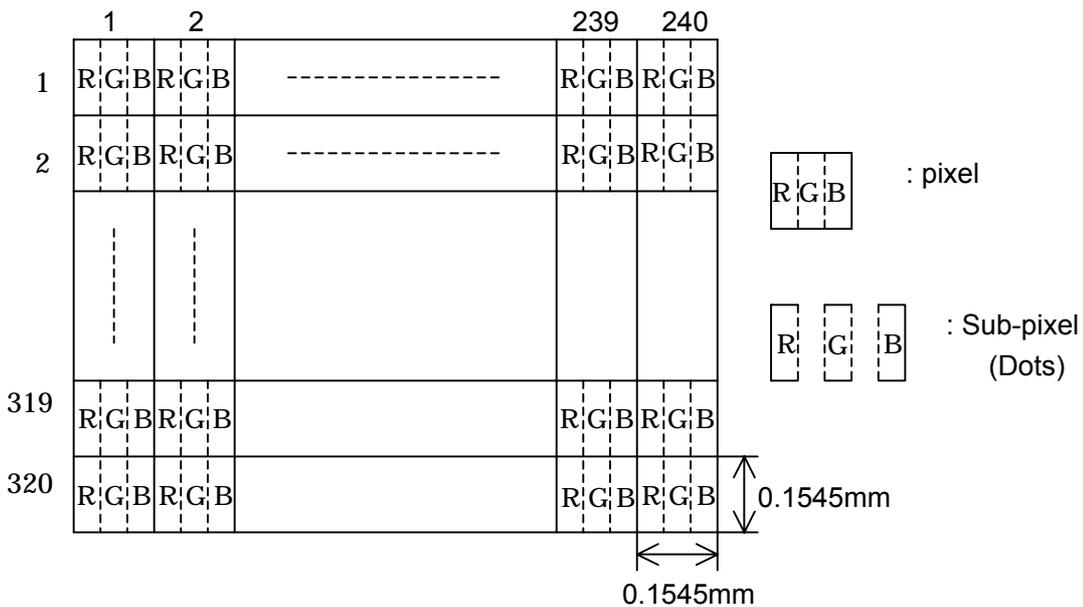

This specification is applicable to Toshiba Matsushita Display Technology Co., Ltd.'s 6.18cm(2.4") diagonal size TFT-LCD module "LTM024P339" designed for mobile phone equipment.

2. Product Specifications

2.1 General Specifications

Item	Specifications
Display Mode	TN color(16 gray scales, 4096 colors) Reflective type, Normally white
Viewing Direction	(6 o'clock) (in direction of maximum contrast)
Driving Method	TFT active matrix
Input Signals	Power Supply; YVDD, YGVSS, YGVDD, CS, XVDD, COM Control Signals ;YST, /YST, YCK, /YCK, YSHUT, /YSHUT, XSWST, /XSWST, XCK, /XCK, XST, /XST, REF1, /REF1, DMA0, V5N, V9N, GMA5B, GMA5A, V9P, V5P, GMA10 Data Signals; DA[3:0], /DA[3:0], DB[3:0], /DB[3:0], DC[3:0], /DC[3:0], DD[3:0], /DD[3:0],
Active Area	37.08 (W) × 49.44 (H) (mm)
Viewing Area	39.08 (W) × 51.44 (H) (mm)
Response Area for Touch Panel	38.75 (W) × 51.14 (H) (mm)
Number of Pixels	240(xRGB) (W) × 320 (H) ¹⁾
Pixel Pitch	0.1545 (W) × 0.1545 (H) (mm) ¹⁾
Pixel Arrangement	RGB vertical stripes ¹⁾
Surface Treatment for Touch Panel	3H
Front Light	2 LEDS
Dimensional Outline	46.8 (W) × 70.4 (H) × 4.5 (D) (mm)

Note 1)

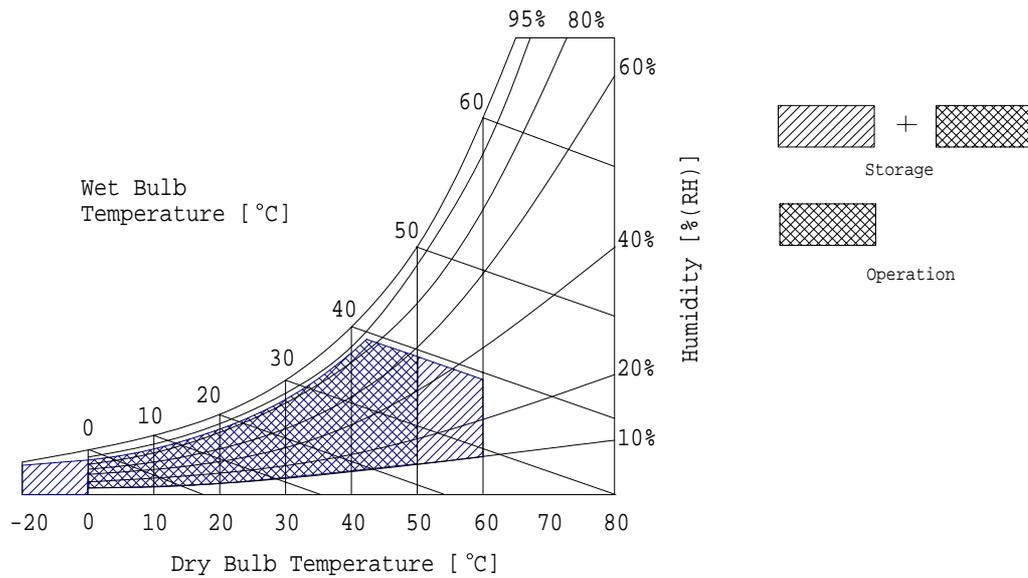

2.2 Absolute Maximum Ratings ¹⁾

Item	Symbol	Min.	Max.	Unit	Checked Terminal
Supply Voltage	VI_2	-2.5	5.0	V	YGVSS
	VI_3	-0.5	10.5	V	XCK,XST, XSWST,YST,YCK,YSHUT,D** ³⁾ REF1
	VI_5	-0.5	10.5	V	COM
	VI_10	-0.5	10.5	V	YVDD, XVDD
	VI_15	-0.5	15.75	V	YGVDD, CS
Supply Voltage for Touch Panel	V _{IT}	0	7	V	
Operating Ambient Temperature ²⁾	T _{OP}	0	50	°C	
Operating Ambient Humidity ²⁾	H _{OP}	10	90	%(RH)	
Storage Temperature ²⁾	T _{STG}	-25	+70	°C	
Storage Humidity ²⁾	H _{STG}	10	90	%(RH)	

Note 1) Do not exceed the maximum rating values under the worst probable conditions taking into account the supply voltage variation, input voltage variation, variation in part constants, and ambient temperature and so on. Otherwise the module may be damaged.

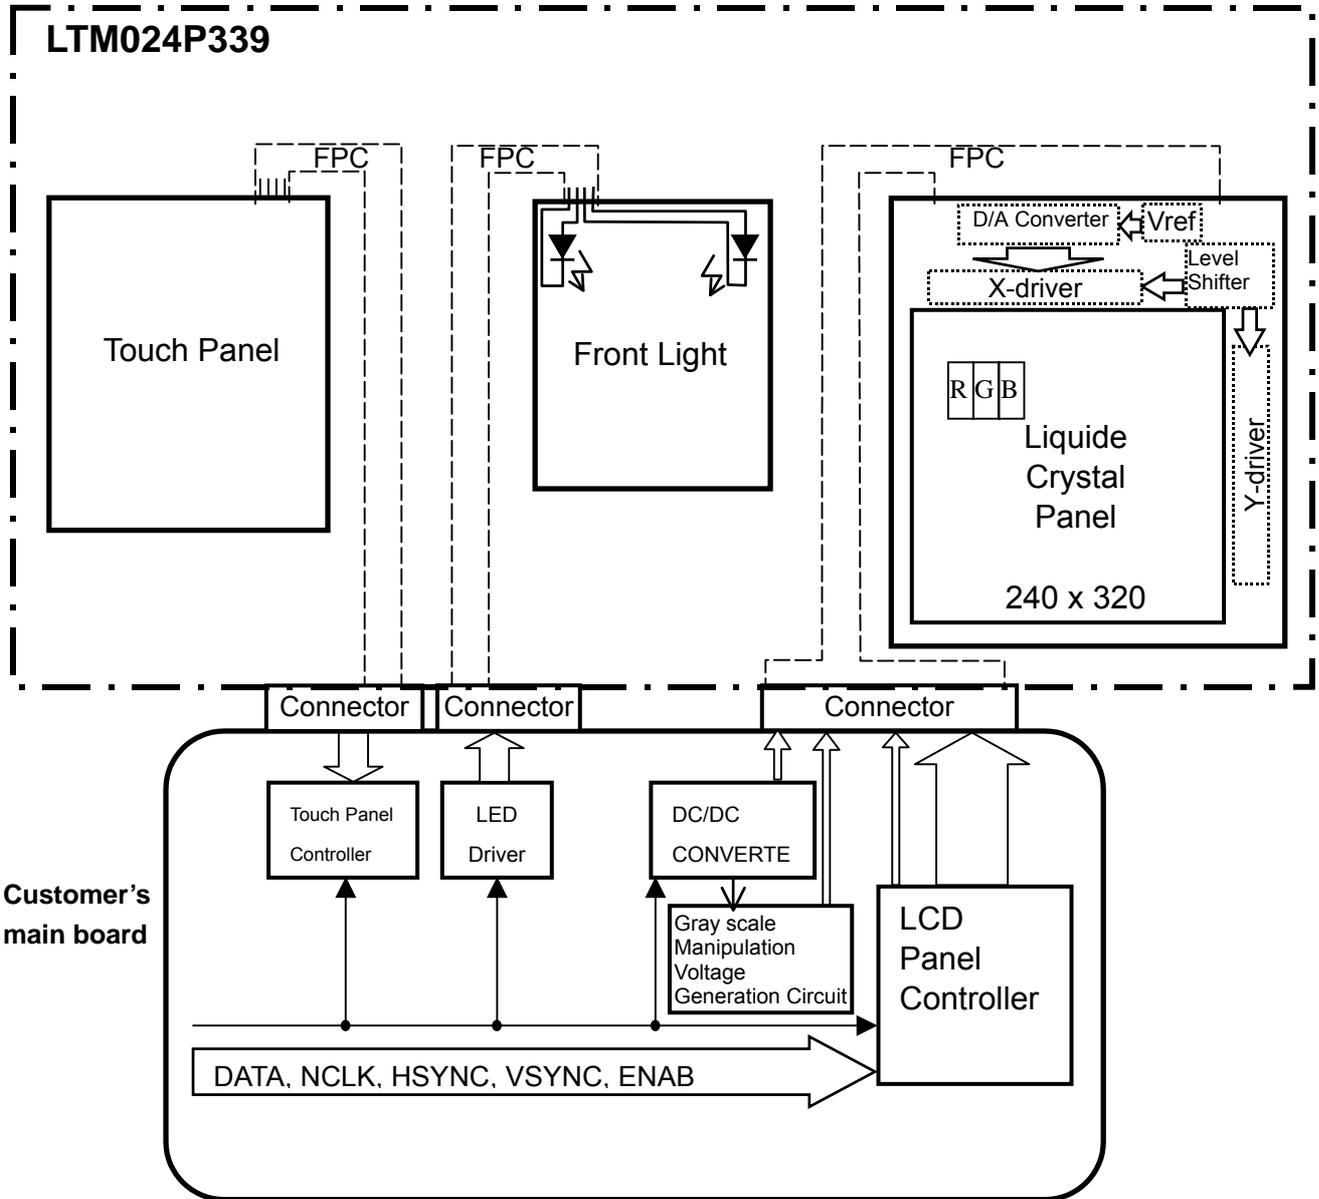

2) Wet bulb temperature should be 39°C Max, and no condensation of water. See figure below.

3) D** means D[3:0] , /D[3:0]

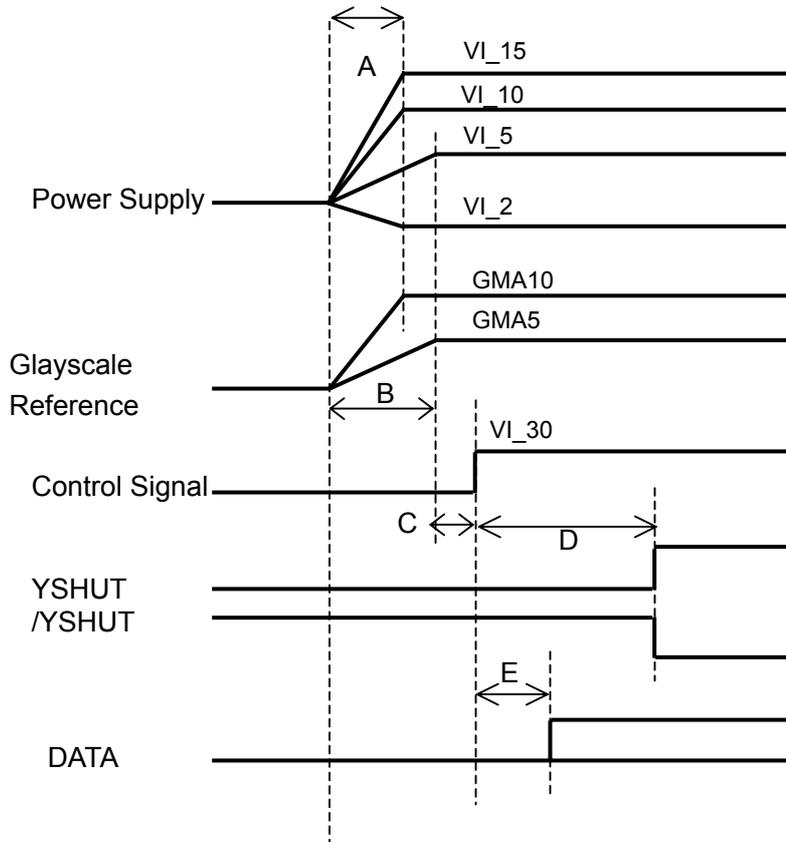

2.4 Electrical Specifications

2.4.1 Circuit Diagram

2.4.2 Sequence of Power Supplies and Signals

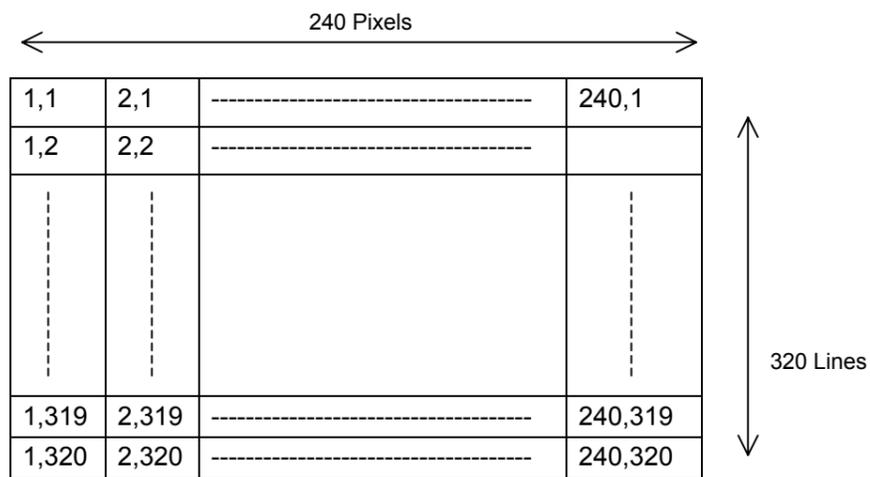

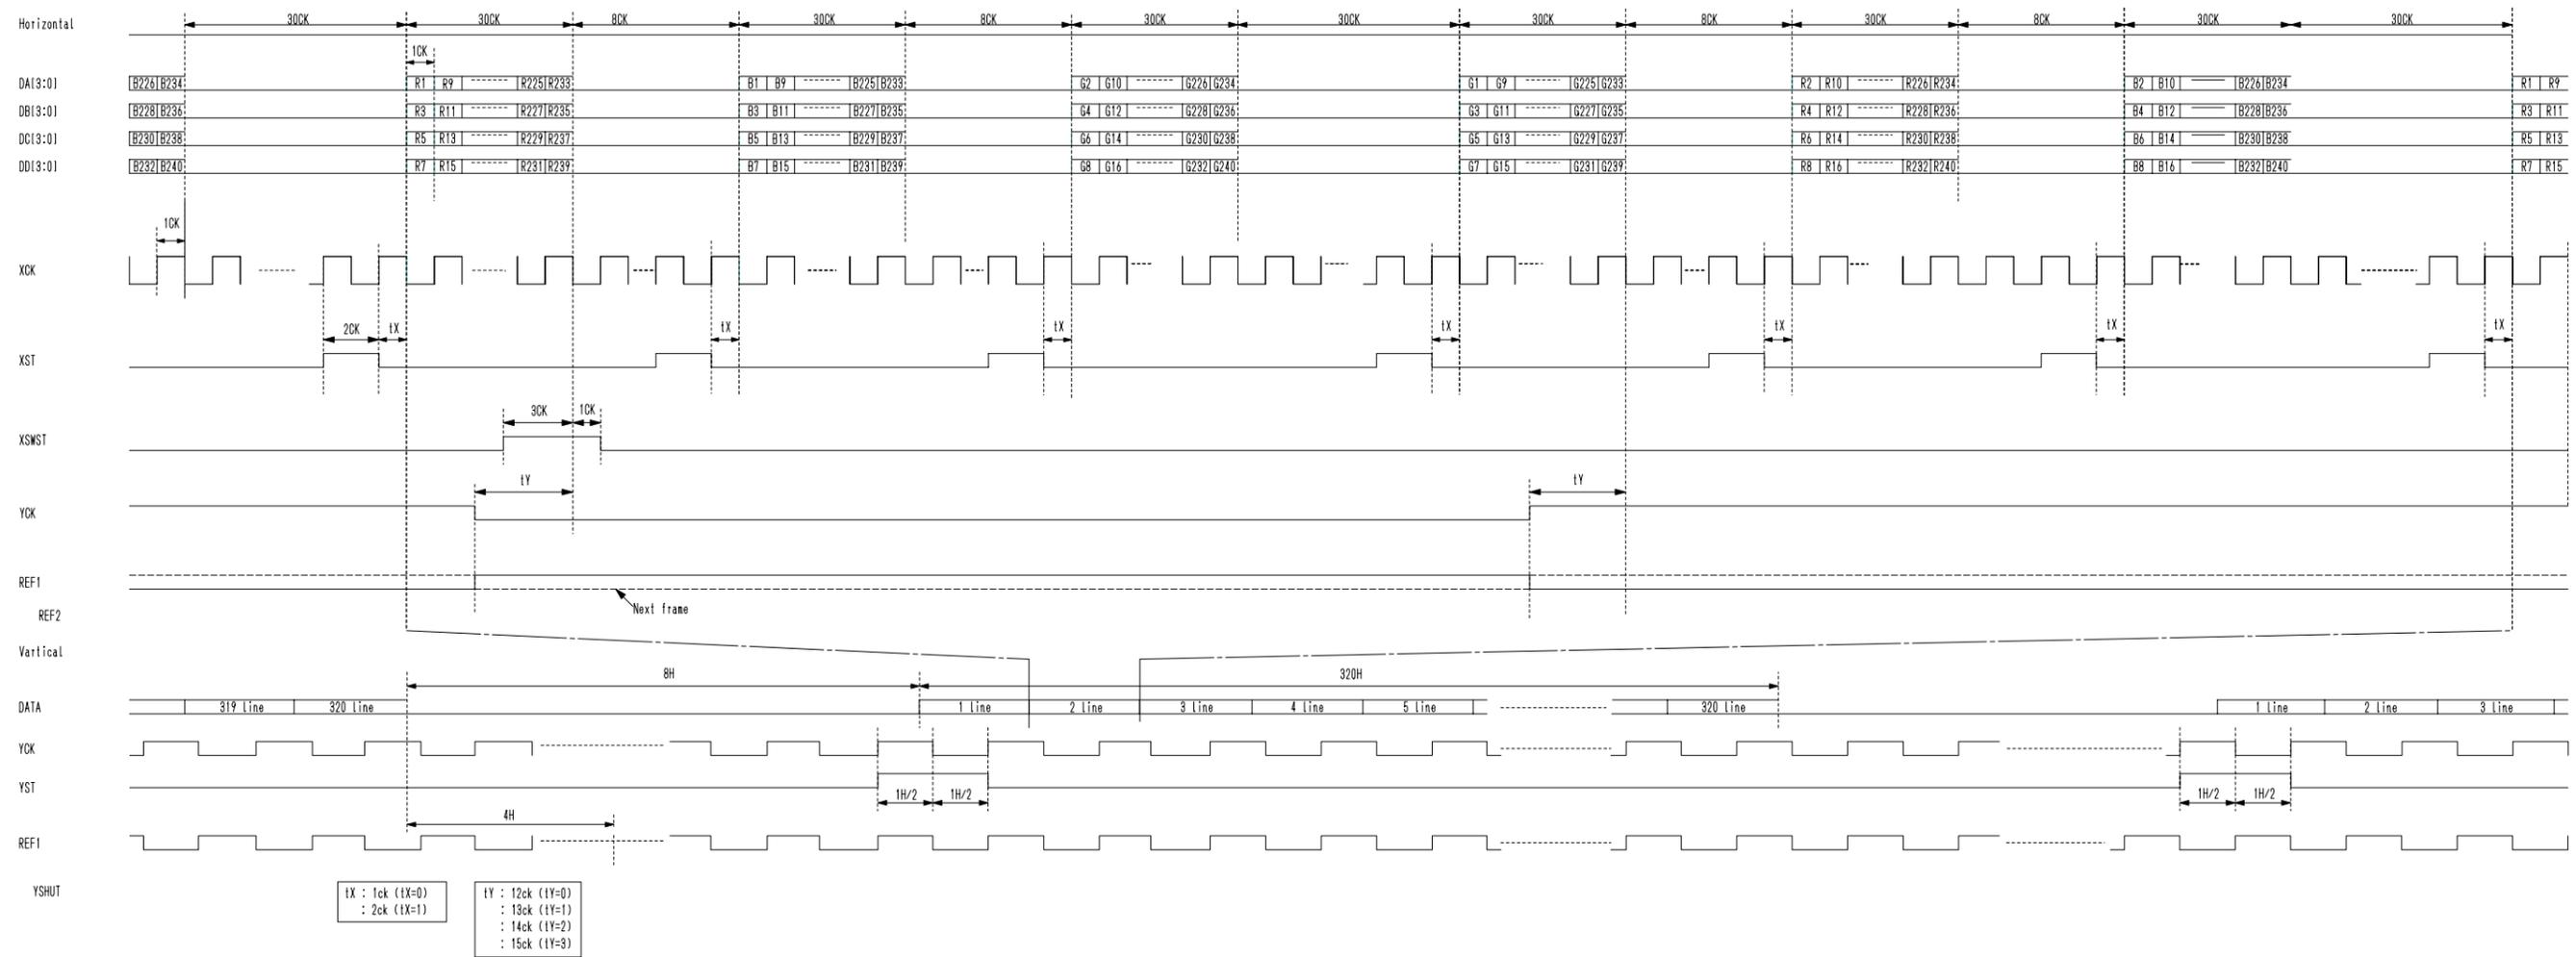

Turn on the power and signal supply sequence is as follows.

Item	Symbol	Signal	Min	Max	unit
A	VI_15	YGVDD,CS	0	30	ms
A	VI_10	YVDD, XVDD,GMA10	0	30	ms
A	VI_2	YGVSS	0	30	ms
A	---	GMA10	0	30	ms
B	VI_5	COM	---	30	ms
B	---	GMA5	---	30	ms
C	---	XCK,XST,XSWST,YCK,YST,YSWST	0	22.22 ¹⁾	ms
D	---	YSHUT	0	22.22 ¹⁾	ms
E	---	DATA	0	22.22 ¹⁾	ms

Note 1) Frame period.

LED Driving Current	(IF)	-	20	20	mA	
Touch Panel Supply Voltage	(VIT)	---	---	7	V	

Note 1) The module should be always operated within these ranges. The "Typ." shows the recommendable value.

4. Electrical Characteristics

4.1 Test Conditions

Ambient Temperature : T_a 25±5°C

Ambient Humidity : H_a 65±20%(RH)

Supply Voltage : Typical Value

Input Signal timing :

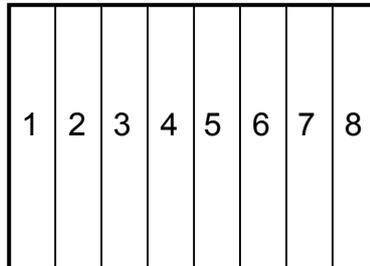

Signal Mode	Vertical			Horizontal			NCLK [MHz]	Note
	FV [Hz]	V-TOTAL [Line]	V-DISP [Line]	FH [KHz]	H-TOTAL [NCLK]	ENAB (H-DISP) [NCLK]		
QVGA	45	328	320	14.74	272	240	4.01	

4.2 Specifications ¹⁾

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
LCD Current Consumption	VI_10	---	3.2	5.4	mA	
	VI_15	---	4.8	30	uA	
	VI_2	---	4.8	30	uA	
LED Current Consumption	I_F	---	20	20	mA	
Power Consumption	LCD ²⁾	---	32	57	mW	@50 cd/m ²
	Frontlight	---	144	160	mW	

Note 1) The Typical value of LCD Current Consumption is measured in the following pattern.

1. White
2. Yellow
3. Purple
4. Red
5. Light Blue
6. Green
7. Blue
8. Black

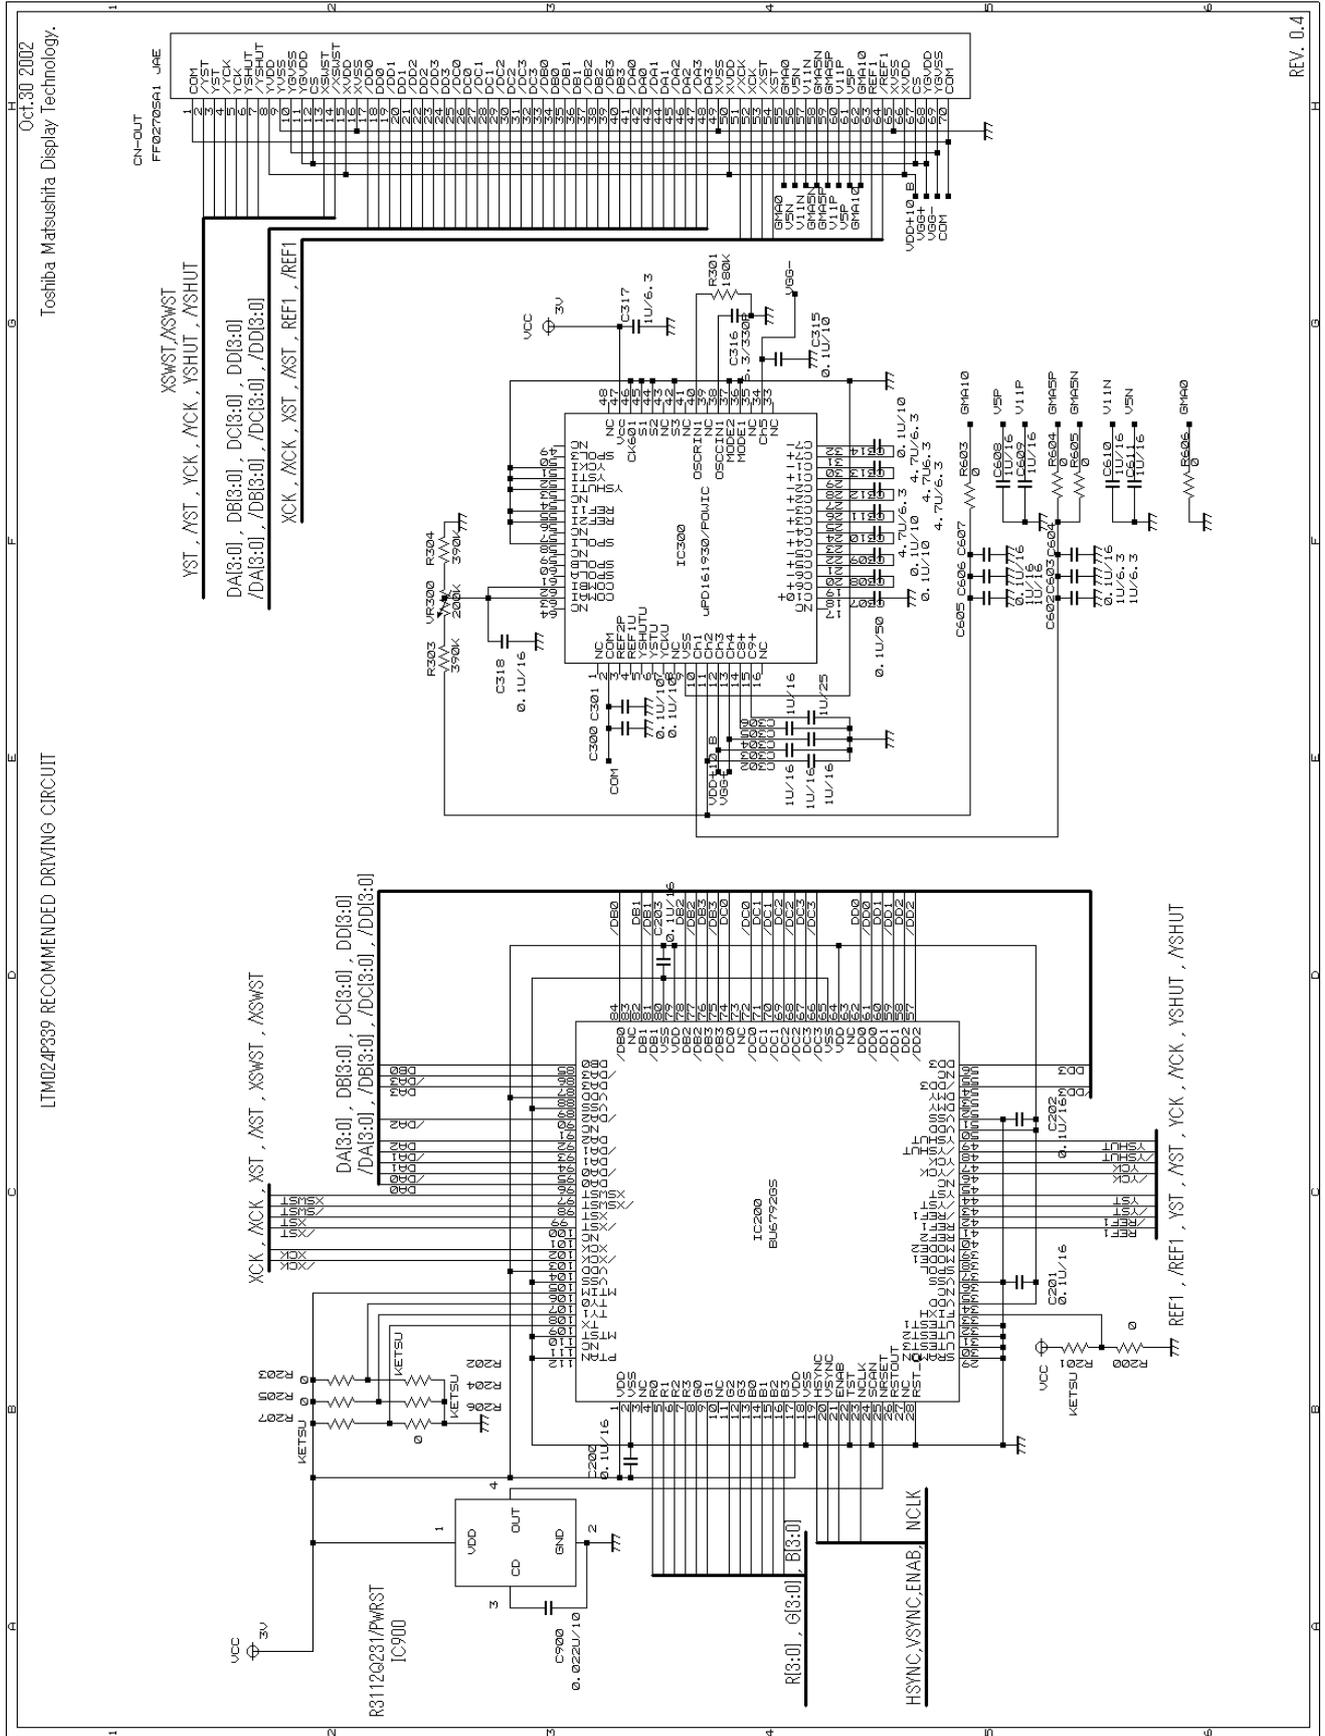

2) without Controller and Power IC

4.3 Touch Panel's characteristics

- 1) Resistance X/Y direction ; X=650+/-300[ohm] , Y=600+/-300[ohm]
- 2) The variation with temperature ; Less than 0.5%/°C
- 3) Flatness=Less than +/- 0.15[mm]

Horizontal Data Timing

Vertical Data Timing

TIMING SPECIFICATION ^{1) 2) 3)} (LCD panel controller input signal)

Signal	Parameter	Symbol	Mn.	Typ.	Max.	Unit	Remarks
NCLK	Clock Period	t_s	244	249	295	ns	4)
	Clock Frequency	$1/t_s$	3.39	4.01	4.1	MHz	
	High Time	t_{sh}	80	$0.5 \times t_s$	-	ns	
	Low Time	t_{sl}	80	$0.5 \times t_s$	-	ns	
HSYNC	Setup to NCLK	t_{fs}	100	$0.5 \times t_s$	-	ns	
	Pulse Width	t_{fw}	$9 \times t_s$	$10 \times t_s$	$16 \times t_s$	-	
VSYNC	Pulse Width	t_{fv}	$2 \times t_{lpd}$	$2 \times t_{lpd}$	-	-	
	VSYNC to DATA	t_{fd}	$4 \times t_{lpd}$	$6 \times t_{lpd}$	-	-	
	Setup to HSYNC	t_{fl}	0	-	-	ns	
	Line Period	$t_{lpd}=t_{lpl}$	$272 \times t_s$	$272 \times t_s$	$272 \times t_s$	-	4)
				67.7		ms	
	Horizontal Display Time	t_{hd}	$240 \times t_s$	$240 \times t_s$	$240 \times t_s$	-	
	Frame Frequency	$1/t_{fpd}$	38	45	46	Hz	
	Frame Period	$t_{fpd}=t_{fpl}$	$328 \times t_{lpd}$	$328 \times t_{lpd}$	$328 \times t_{lpd}$	-	
	Vertical Display Time	t_{vd}	$320 \times t_{lpd}$	$320 \times t_{lpd}$	$320 \times t_{lpd}$	-	
	Setup	t_{ds}	20	$0.5 \times t_s$	-	ns	
DATA	Hold	t_{dh}	20	$0.5 \times t_s$	-	ns	
	Setup	t_{drs}	20	$0.5 \times t_s$	-	ns	
ENAB	Hold	t_{drh}	20	$0.5 \times t_s$	-	ns	
	Display Start	t_{drds}	-	$16 \times t_s$	20	-	

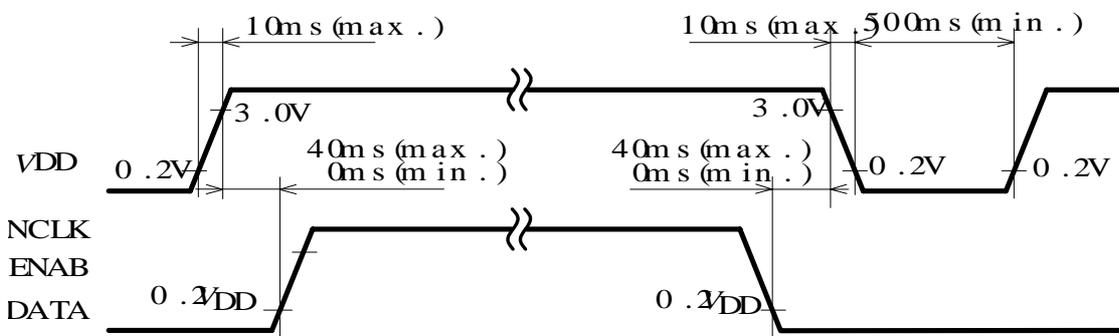

Note 1) When ENAB is fixed to "H" level or "L" level after NCLK input, the panel is displayed as black. However, it may be occurred a flicker on the display.

Note 2) When NCLK is fixed to "H" level or "L" level, the panel becomes white stage after several seconds.

Note 3) Do not change t_s and t_{lpd} values in the operation. When t_s or t_{lpd} is changed, the panel is displayed as black.

Note 4) Please adjust LCD operating signal timing and LED driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and LED driving condition (especially driving frequency).

SEQUENCE OF POWER SUPPLIES AND SIGNALS

5. Optical Characteristics

5.1 Test Conditions

It is same as 4.1

The measuring method is shown in 11.

5.2 Optical Specifications ¹⁾

Note 1): Refer to "11. Measuring Method".

6.Quality

6.1 Test Conditions

- 1) Ambient Temperature : 25±5°C
- 2) Ambient Humidity : 65±20%(RH)
- 3) Illumination : Approximately 2000lx , 500 lx under the fluorescent lamp
- 4) Viewing Distance : Approximately 0.3m by the eyes of the inspector from the LCD module

6.2 Dimensional Outline

The products shall conform to the dimensions specified in 2.3.2.

6.3 Appearance Test

6.3.1 Test Conditions

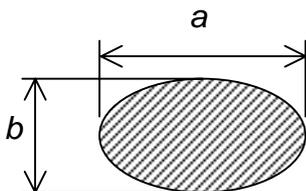

- 1) Condition : Non-operating, operating (Pattern : L15 white raster)
Same as 6.1

6.3.2 Specifications

Note 1) Inspection area should be within viewing area.

Average Diameter $D = (a+b) / 2$ (mm)

The definition of Length and Width

6.4 Display Quality(LCD)

6.4.1 Test Conditions

- 1) Inspection Area : Within active area
- 2) Driving Condition : Same as test conditions shown in 4.1 and 6.1
- 3) Test Pattern : White display pattern (gray scale level L15) and black display pattern (gray scale level L0)

6.4.2 Specifications

Item	Description / Specifications	LCD Patterns
Function	No display, Malfunction	
Display Quality ¹⁾	Missing line	R,G,B,W,Black
	Missing Sub-Pixels	Black
	1) Bright defects (Single) ; N 2pcs. 2) 3) 4) (Two adjacent) ;N 0set. (Three adjacent or more) ;N 0pcs.	
	2) Dark defects (Single) ; N 2pcs. 2) 3) 4) (Two adjacent) ;N 0set. (Three adjacent or more) ;N 0pcs.	
	3) Total defects ; N 4pcs.	R,G,B,W,Black
	Inconspicuous flicker, crosstalk, Newton's ring and other defects : neglect ⁴⁾	-
Black and White Spots/lines	Inconspicuous defects : neglect	-
Frontlight	Missing (Non-operating)	-

Note 1) Defects of both color filter and black matrix are counted as bright or dark defects.

Inspection area should be within the active area.

Note 2) Bright defect means a bright spot(sub-pixel) on the display pattern of gray scale L0(Black).

Dark defect means a dark spot(sub-pixel) on the display pattern of gray scale L15(R,G,B,White).

Note 3) Bright defect which can not be found by using 5%ND-Filter shall not be counted as a defect.

Note 4) INVENTEC ELECTRONICS(NANJING) CO., LTD and Toshiba Matsushita Display Technology Co., Ltd. will discuss it when inconspicuous defect(flicker, crosstalk, Newton ring etc)happen.

6.5 Reliability Test

6.5.1 Test Conditions

- 1) The module should be driven and inspected under normal test conditions.
- 2) The module should not have condensation of water (moisture) on the module.
- 3) The module should be inspected after two or more hours storage in normal conditions (15 - 35°C, 45 - 65%(RH)).
- 4) A module shall be used only for one test.

6.5.2 Specifications

The module shall have no failure in the following reliability test items.

Test Item	Test Conditions	Remark
High Temperature Operation ¹⁾	50°C 192 h	
High Temperature Storage ²⁾	70°C 192 h	
High Temperature and High Humidity operation ¹⁾	50°C 90% 192 h	
High Temperature and High Humidity Storage ²⁾	50°C 90% 192 h	
Low Temperature Operation ¹⁾	0°C 192 h	
Low Temperature Storage ^{2),3)}	-25°C 192 h	
Temperature Shock ^{2),3)}	-25°C ⇔ 70°C 30 min. 5min. 30 min. 50 cycles	

Note 1) Operating

Note 2) Non-Operating

Note 3) Except Front Light

Definitions of failure for judgment shall be as follows:

- 1) Function of the module should be maintained.
- 2) Current consumption should be smaller than the specified value.
- 3) Appearance and display quality should not have distinguished degradation.

6.6 Labels

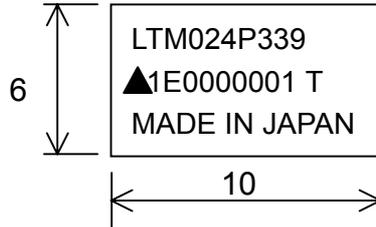

(1) Product Label

Unit: mm

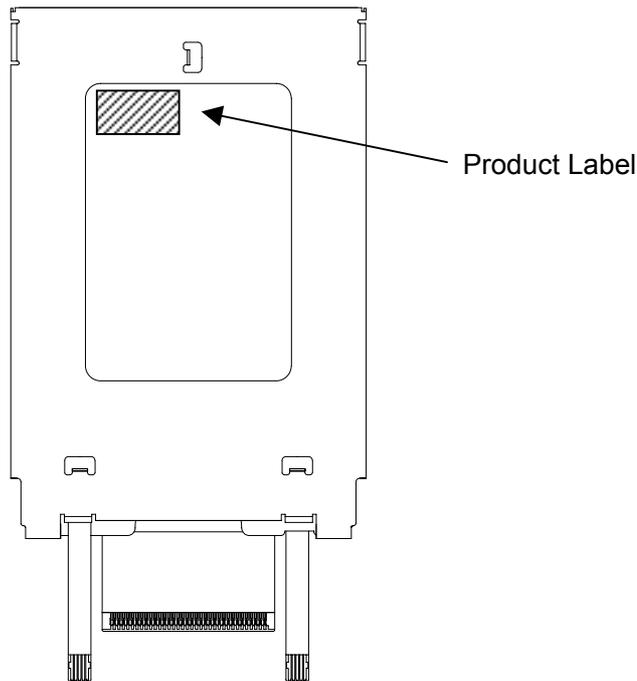

Serial number : ▲ 1E 0000001 T
 (1) (2) (3) (4)

- (1) : Manufacturing code
- (2) : Year code-end of the A.D
 Month code-alphabet→ Jan. : A - Dec. : L
 (Example: 1G→2001 JUL.)

- (4) : Serial code
 (decimal, 7 figures)
- (6) : TOSHIBA MATSUSHITA DISPLAY TECHNOLOGY CO., LTD. internal code

(2) Label Locations

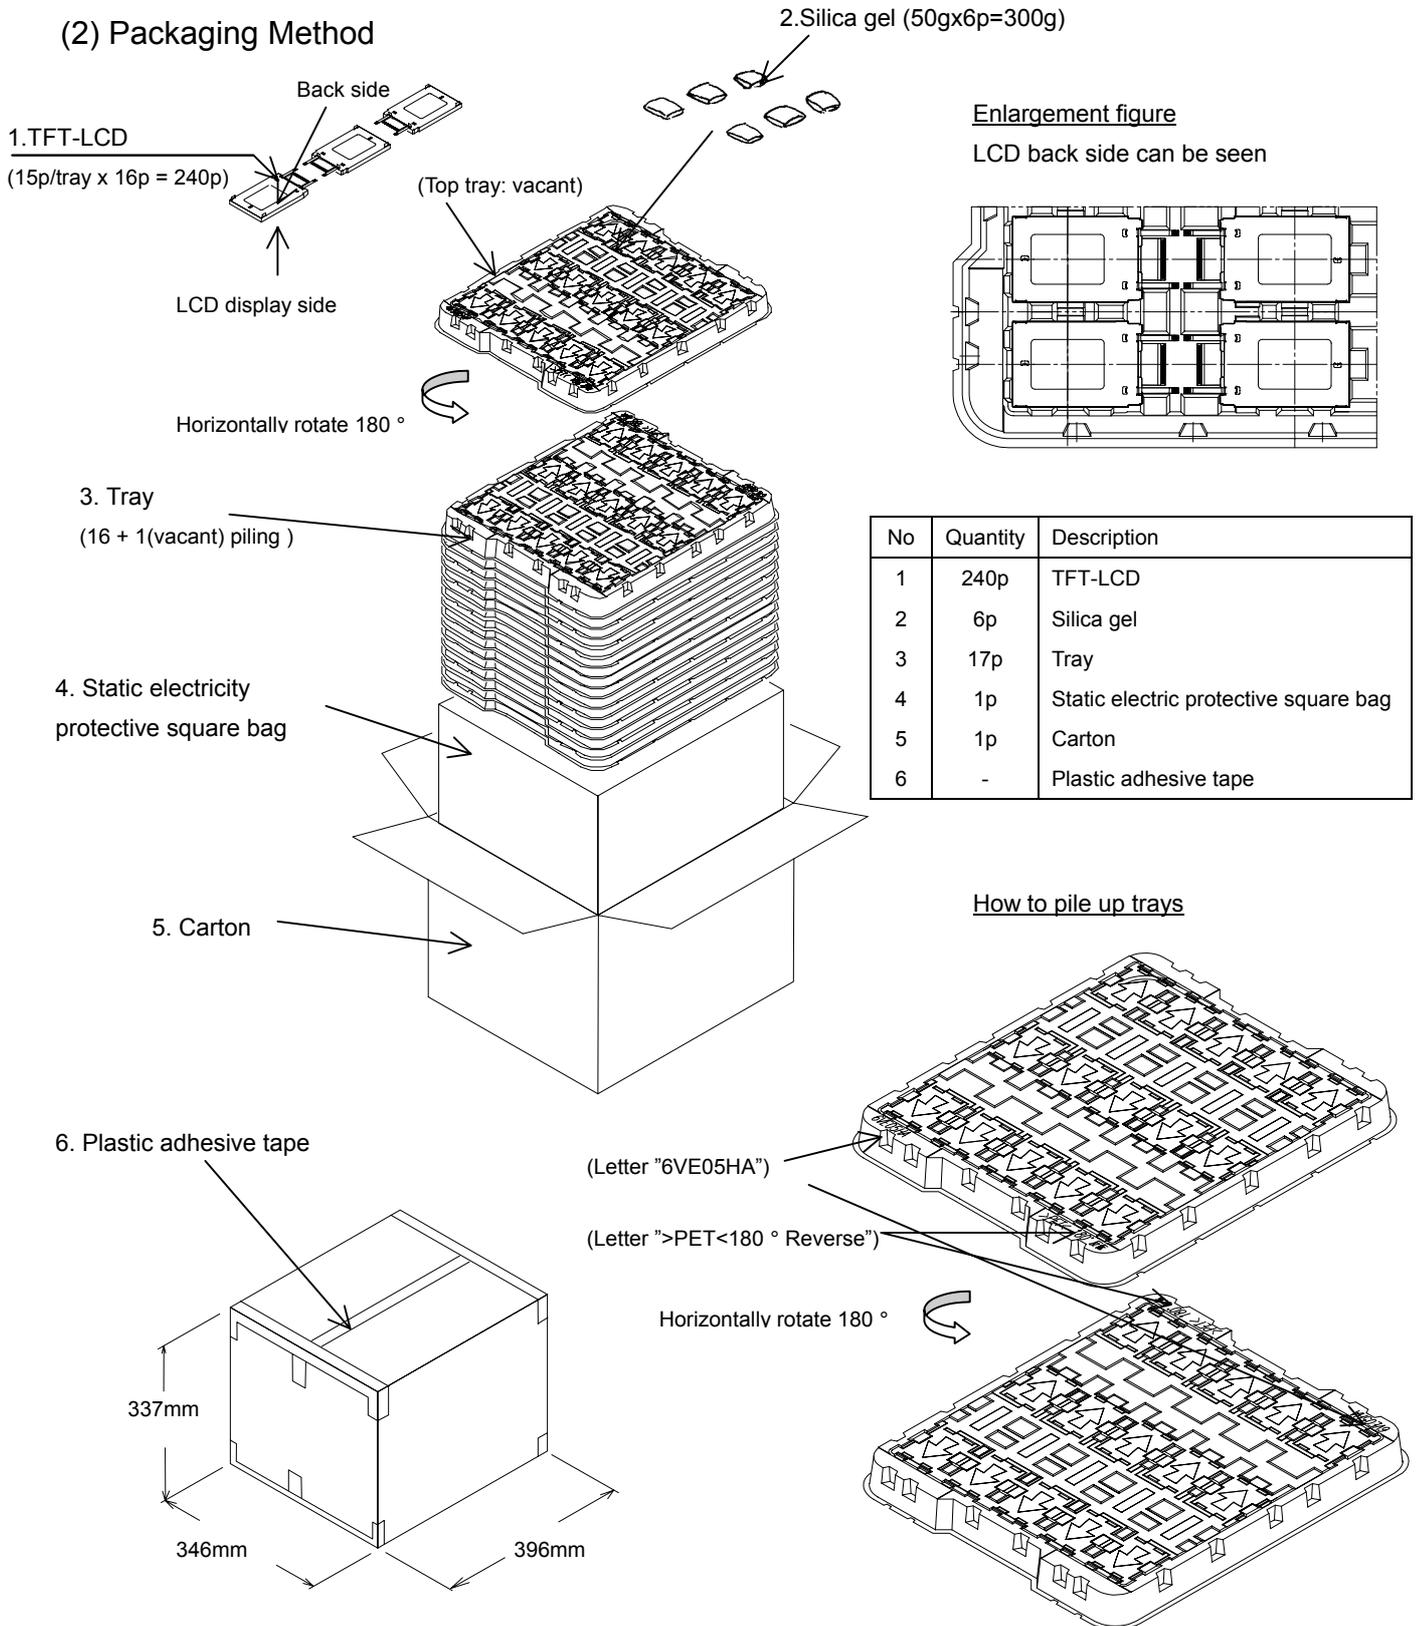

7. Packaging

7.1 Carton (internal package)

(1) Packaging Form

Corrugated cardboard box

(2) Packaging Method

8. Warranty

Warranty clause will be decided separately.

9. Regulation

The set (which our LCD module is assembled into) to conform the regulations below, take measures in set side. Toshiba Matsushita Display Technology Co., Ltd. is not liable for the regulations to the complete set, nor can guarantee our LCD module conform the regulation by itself.

a) Examples of EMI Regulations

FCC : PART15 CLASS B

VCCI : CLASS B

CISPR : CLASS B

b) Examples of Safety Regulations

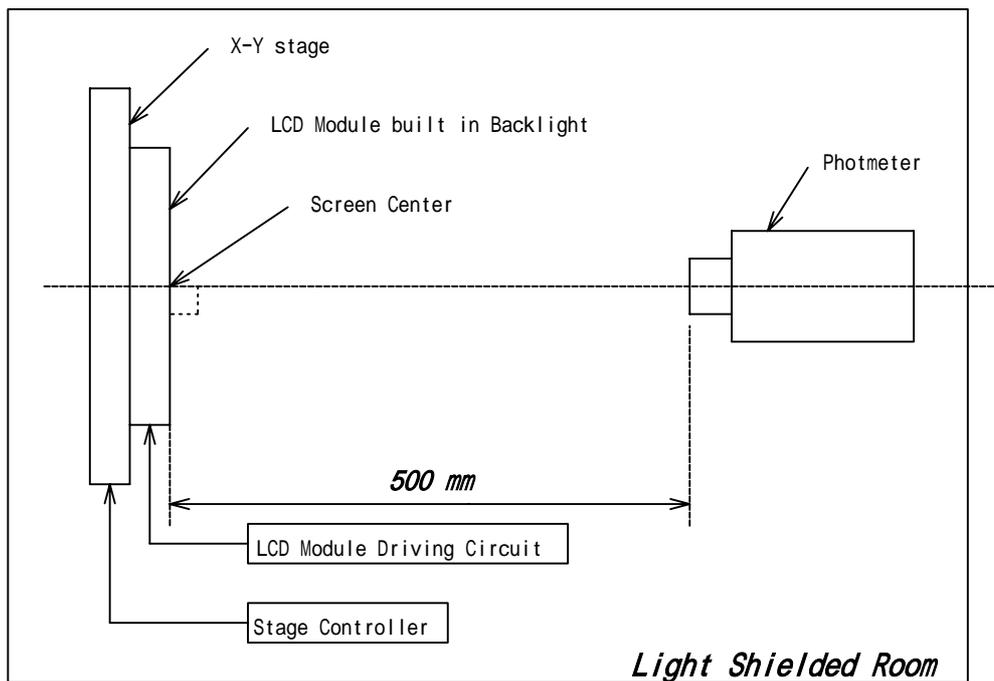

IEC 950

UL 1950

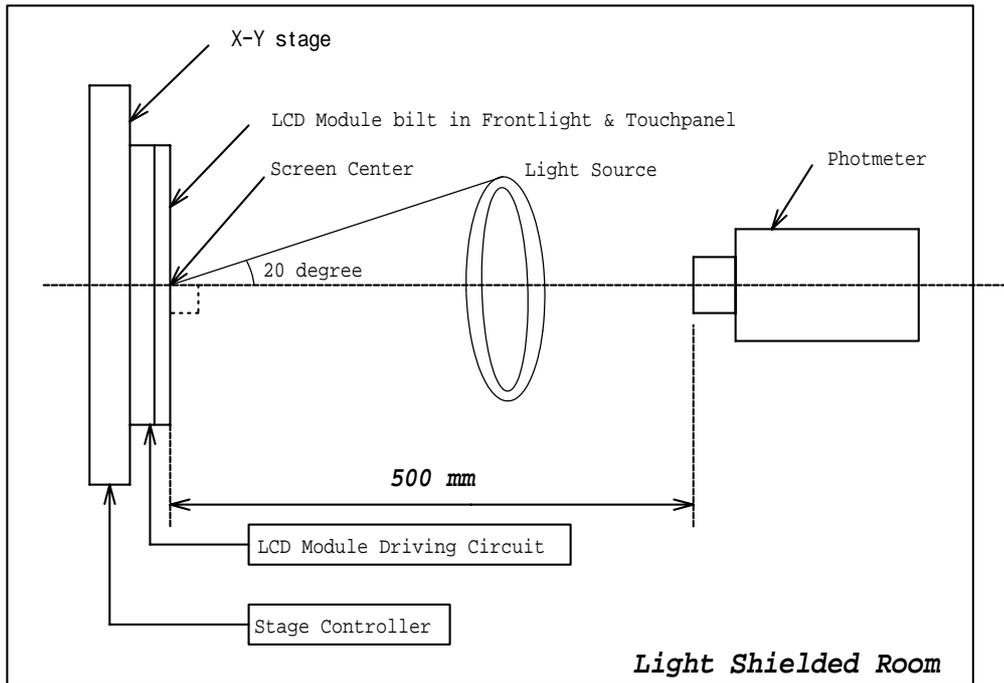

10. Measuring Method

10.1 Measuring System

1) Frontlight : ON

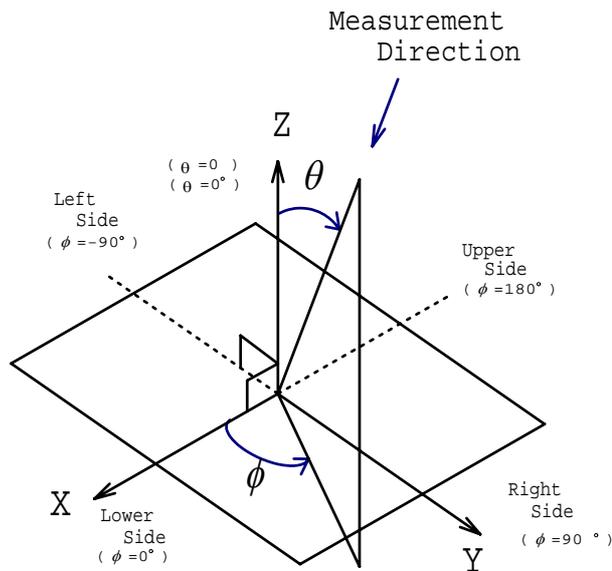

2) Frontlight : OFF

(1) The measurement point is the center of the active area except for the measurement of Luminance Uniformity.

(2) Photometer : BM-7/BM-5A TOPCON (Aperture 1deg.)

(3) Definition of θ and ϕ :

10.2 Measuring Methods

(1) Luminance:

The luminance of the center on a white raster (gray scale level L15) shall be measured.

(2) Contrast Ratio:

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = L15 / L0$$

L15 : Luminance on the white raster (gray scale level L15)

L0 : Luminance on the black raster (gray scale level L0)

(3) Viewing Angle

Viewing angle is defined as the angles (θ, ϕ), in which specified contrast ratio can be obtained.

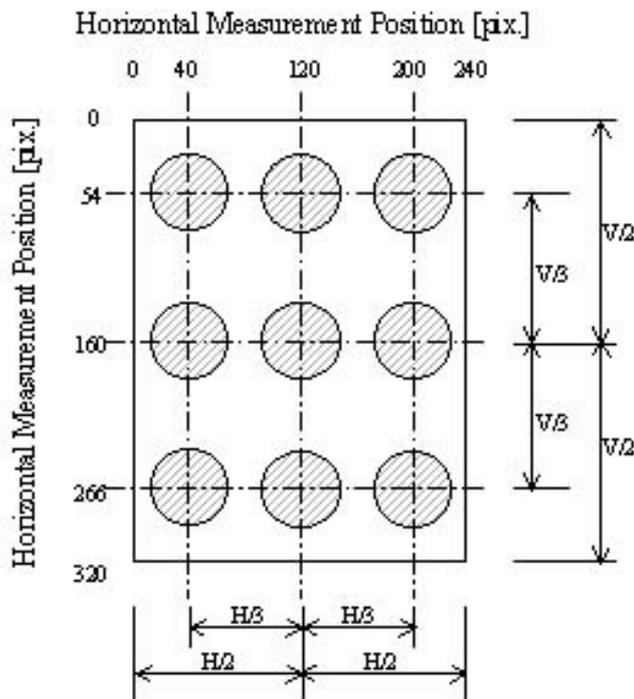

(Refer to 11.1(3) for the axes.)

(4) Luminance Uniformity:

The Luminance should be measured at 9 positions on white raster(gray scale level L15).

Uniformity can be calculated by the following expression.

$$\text{Luminance Uniformity} = \frac{\text{Minimum Luminance}}{\text{Maximum Luminance}} \times 100\%$$

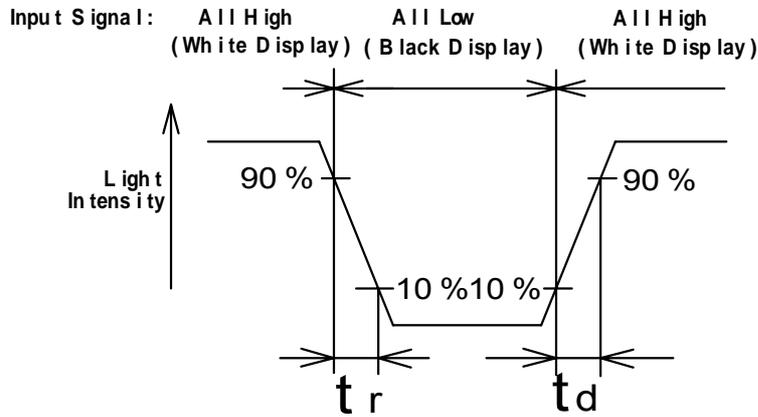

(5) Chromaticity :

The values(x,y) of chromaticity coordinates should be measured for the White, Red, Green and Blue Raster(gray scale level L15) each with a photometer.

(6) Response Time :

The response time (τ_r, τ_d) is measured with a photo detector (photodiode) which measures the light intensity of the pixels.

τ_r : Turn on time is the time for a photo detector output waveform to go from 90% value to 10% of its maximum.

τ_d : Turn off time is the time for a photo detector output waveform to go from 10% to 90% of its maximum.

Photodiode : S1223-01 HAMAMATSU PHOTONICS K.K.

White Display : White Raster (gray scale level L15)

Black Display : Black Raster (gray scale level L0)
