NEC

TFT COLOR LCD MODULE
NL10276AC28-02L

36 cm (14.1 inches), 1024 × 768 pixels, Full-color, Ultra-wide viewing angle, Multi-scan function, CRT interface board

DESCRIPTION

NL10276AC28-02L is a TFT (thin film transistor) active matrix color liquid crystal display (LCD) comprising amorphous silicon TFT attached to each signal electrode, a driving circuit, a CRT interface board and a backlight. NL10276AC28-02L has a built-in backlight with an inverter.

The 36 cm (14.1 inches) diagonal display area contains 1024 × 768 pixels and can display full-color (more than 16 million colors simultaneously). Also, it has ultra wide viewing angle and multi-scan function. Therefore, we call this module Super Fine TFT.

FEATURES

- Ultra-wide viewing angle and low reflection
- CRT interface board
  Auto recognition of input signal:
    Analog RGB signals, Synchronous signals (Hsync, Vsyn, Composite)
  Digital control: e.g. Brightness, Display Position
  Free supply voltage sequence
  Corresponding to DDCI and DDC2B
  Corresponding to VESA DPMS

- Multi-scan function: e.g. XGA, SXGA, XGA, SVGA, VGA, VGA-TEXT, MAC
- Incorporated edge type backlight (Four lamps into two lamp holders, Inverter)
- Lamp unit replaceable
  (note)
    VESA : Video Electronics Standards Association
    DPMS : Display Power Management Signaling
    DDC1 : Display Data Channel 1
    DDC2B : Display Data Channel 2B

APPLICATIONS

- Desk-top type of PC
- Engineering workstation
- Display terminals for control system
- Monitors for process controller
On Screen Display

Regarding the use of OSD, please note that there is possibility of conflicts with a patent in Europe and the U.S.

Thus, if such conflict might happen when you use OSD, we shall not be responsible for any trouble.

The information in this document is subject to change without notice.
Please confirm with the delivery specification before starting to design the system.

STRUCTURE AND FUNCTIONS

A color TFT (thin film transistor) LCD module is comprised of a TFT liquid crystal panel structure, LSIs for driving the TFT array, and a backlight assembly. The TFT panel structure is created by sandwiching liquid crystal material in the narrow gap between a TFT array glass substrate and a color filter glass substrate. After the driver LSIs are connected to the panel, the backlight assembly is attached to the backside of the panel.

RGB (red, green, blue) data signals from a source system is modulated into a form suitable for active matrix addressing by the onboard signal processor and sent to the driver LSIs which in turn addresses the individual TFT cells.

Acting as an electro-optical switch, each TFT cell regulates light transmission from the backlight assembly when activated by the data source. By regulating the amount of light passing through the array of red, green, and blue dots, color images are created with clarity.

OUTLINE OF CHARACTERISTICS (at room temperature)

Display area	285.696 (H) $\times$ 214.272 (V) mm
Drive system	a-Si TFT active matrix
Display colors	Full-color
Number of pixels	1024 (H) $\times$ 768 (V)
Pixel arrangement	RGB vertical stripe
Pixel pitch	0.279 (H) $\times$ 0.279 (V) mm
Module size	330.0 (H) $\times$ 255.0 (V) $\times$ 23.3 (D) mm (typ.)
Weight	1530 g (typ.)
Contrast ratio	150:1 (typ.)

Viewing angle (more than the contrast ratio of 10:1)

- Horizontal : 85° (typ., left side, right side)
- Vertical : 85° (typ., up side, down side)

Designed viewing direction

- Optimum grayscale ($\gamma = 2.2$): perpendicular

Color gamut	40% (typ., At center, To NTSC)
Response time	34 ms (typ.), "black 100%" to "white 10%"
Luminance	200 cd/m^2 (typ.)
Input signals	Analog RGB signals, Synchronous signals (Hsync and Vsync or Composite)
Backlight	Edge light type: Four cold cathode fluorescent lamps with an inverter
	Lamp holder : 141LHS11
	Inverter : 150PW011
Supply voltage	12 V, 12 V (Logic/LCD driving, Backlight)
Power consumption	25.1 W (typ.)

BLOCK DIAGRAM
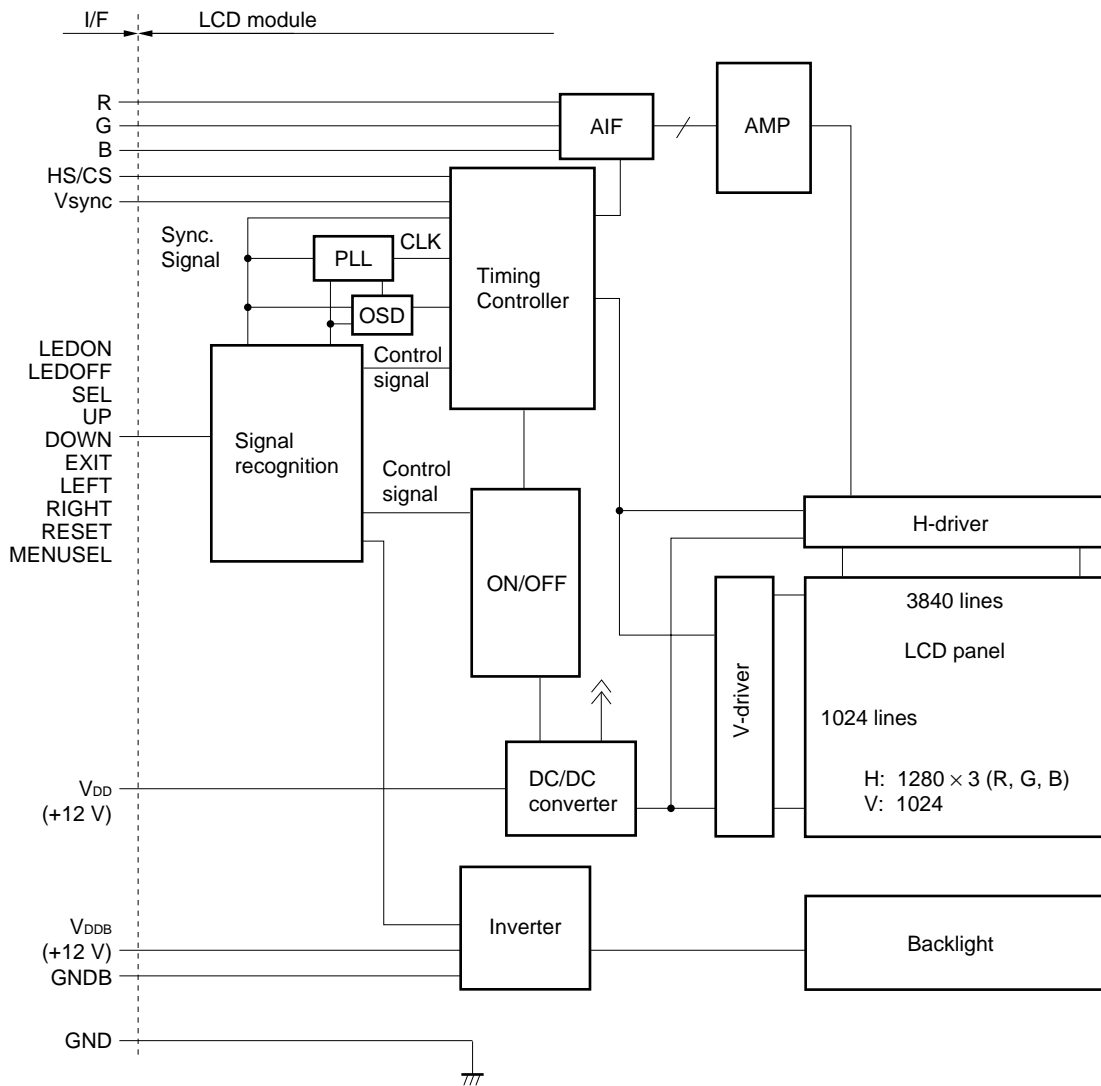

HS : Hsync

CS : Composite synchronous signal

Note: Neither GND nor GNDB is connected to frame. These should be connected in customer equipment.

SPECIFICATIONS

GENERAL SPECIFICATIONS

Item	Contents	Unit
Module size	330 ± 0.5 (H) $\times$ 255.0 $\pm$ 0.5 (V) $\times$ 24.5 (max.) (D)	mm
Display area	285.696 (H) $\times$ 214.272 (V)	mm
Number of dots	1024×3 (H) $\times$ 768 (V)	dots
Pixel pitch	0.279 (H) $\times$ 0.279 (V)	mm
Dot pitch	0.093 (H) $\times$ 0.279 (V)	mm

	Absolute humidity shall not exceed T_a = 50°C, 85 % relative humidity) level.			Ta > 50°C

Note Measured at the LCD panel (Including self-fever)

ELECTRICAL CHARACTERISTICS

(1) Logic, LCD driving, Backlight

($T_a = 25°C$)

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
Supply voltage	V_{DD}	11.4	12.0	12.6	V	Logic and LCD driving
	$V_{DD}B$	11.4	12.0	12.6	V	Backlight
Logic input "L" voltage	V_{IL}	0	–	0.8	V	HS/CS, Vsync, SEL, UP, DOWN, SEL, RESET, EXIT, RIGHT, LEFT, DDCCLK, DDCDAT
Logic input "H" voltage	V_{IH}	2.2	–	5.25	V	
Logic output "L" voltage	V_{oL}	–	–	0.4	V	DDCDAT
Logic output "H" voltage	V_{oH}	2.4	–	–	V	
Logic input "L" current	I_{IL}	–1	–	–	μA	HS/CS, Vsync
Logic input "H" current	I_{IH}	–	–	1	μA	
Logic output "L" current 1	I_{oL1}	–	–	1	μA	DDCDAT
Logic output "H" current 1	I_{oH1}	–1	–	–	μA	
Supply current	I_{DD}	–	630	900	mA	VDD = 12.0 V
		–	170	200	mA	Power saving mode VDD = 12.0 V
	$I_{DD}B$	–	1460	1600	mA	VDDB = 12.0 V (Max. luminance)
		–	0.3	10	mA	Power saving mode VDDB = 12.0 V

(2) Video signal (R, G, B) input

($T_a = 25°C$)

Item	Min.	Typ.	Max.	Unit	Remarks
Maximum amplitude (white - black)	0 (black)	0.7 (white)	*A	Vp-p	**Note**
DC input level (black)	–0.5	–	+2.5	V	–
Sync level	0.2	0.3	*B (0.6)	Vp-p	G terminal (sync on green)
*A + *B	–	–	1.1	Vp-p	–

Note Contrast adjustment is needed if the amplitude exceeds 0.7 Vp-p.

POWER SUPPLY DESIGN

(1) Please note that the supply voltage must not be applied while the control signals (SEL, UP, DOWN, EXIT, LEFT, RIGHT and RESET) are connected to GND. Otherwise the module may cause malfunction.

(2) If the power supply voltage is applied while UP and DOWN are connected to GND, the input control signals become ineffective mode. To reset this mode, turn off the power once and turn on the power while UP and DOWN are connected to GND. Then, the mode will be released.

(3) Do not change MENUSEL setting while the module is operated.
MENUSEL selection (Hierarchical type or Toggle type) is set when the power supply voltage is applied.

(4) Inverter current wave
Inverter current wave is as follows.
maximum luminance control: 100 % (Duty)
minimam luminance control: 20 % (Duty)
Luminance control frequency ≒ Input Vsync frequency $\times$ K
Input Vsync frequency ≤ 75 Hz: K = 4.6
Input Vsync frequency > 75 Hz: K = 3.6

(5) Ripple of supply voltage
Please note that the ripple at the input connector of the module should be within the values shown in this table. It the ripple is beyond these values, the noise may appear on the screen.

|	V_{DD} (for logic and LCD driver)	$V_{DD}B$ (for backlight)
Acceptable range	≤ 100 mVp-p	≤ 200 mVp-p

Note The acceptable range of ripple voltage includes spike noise.

Example of the power supply connection
  a) Separate the power supply   b) Put the filter

Filter* (reference value)
L = 10 μH to 100 μH
C = 10 μF to 100 μF

(6) $V_{DD}B$ should be started up within 300 ms, otherwise, the protection circuit makes the backlight turn off.

INPUT SIGNALS

INPUT SYNCHRONOUS SIGNAL

This module is corresponding to the synchronous signals below.

Auto recognition mode	Synchronous signal		
	HS/CS	Vsync	Sync. On Green
Separate synchronous signal mode (HS, Vsync)	Input	Input	Input or no input
Composite synchronous mode	Input (cs)	No input	Input or no input
Sync. On Green mode	No input	No input	Input
Power saving mode	Input (HS)	No input	Input or No input
	No input	Input	Input or no input
	No Input	No input	No input

Note 1: Power saving mode corresponds to VESA DPMA.

Note 2: The module recognizes Sync on Green signal automatically, when the FUNC in SOG Sel of Sel Data is "Y". Refer to **INITIAL VALUE CHANGE FUNCTION**.

In case of Sync on Green mode, input signals (R, G, B, Sync on Green) must be inputted before power on.

PRESET TIMING

The 14 types of display timing shown below are preset in this module. The input synchronous signals are automatically recognized.

Preset No.	Display size	Vsync (Hz)	Hsync (kHz)	SYSTEM CLK (MHz)	V Pulse (H)	V B.Porch (H)	H Pulse (CLK)	H B.Porch (CLK)	Sync Logic V, H	Remarks
1	640 × 400	56.432	24.830	21.053	8	25	96	48	–,–	*
2	640 × 480	59.992	31.469	25.175	2	33	96	48	–,–	VGA
3	720 × 400	70.087	31.469	28.322	2	35	108	45	+,–	VGA TXT
4	800 × 600	60.317	37.879	40.000	4	23	128	88	+,+	VESA
5	640 × 480	66.667	35.000	30.240	3	39	64	96	SonG	Macintosh
6	640 × 480	75.000	37.500	31.500	3	16	64	120	–,–	VESA
7	720 × 400	85.039	37.927	35.500	3	42	36	144	+,–	VESA
8	640 × 480	85.008	43.269	36.000	3	25	48	112	–,–	*
9	1024 × 768	60.004	48.363	65.000	6	29	136	160	–,–	VESA
10	800 × 600	75.000	46.875	49.500	3	21	80	160	+,+	VESA
11	832 × 624	74.565	49.735	57.283	3	39	64	224	SonG	Macintosh
12	800 × 600	85.061	53.674	56.250	3	27	64	152	+,+	*
13	1024 × 768	70.069	56.476	75.000	6	29	136	144	+,+	VESA
14	1024 × 768	75.029	60.023	78.750	3	28	96	176	+,+	VESA

* Out of specification.

Note 1. Even if the preset timing is entered, a little adjustment of the functions such as Horizontal period, CLK-delay and display position, are required. The adjusted values are memorized in every preset No.

Note 2. This module recognizes the synchronous signals with near preset timing of the frequency of HS, Vsync, even in the case that the signals other than the preset timing that were entered. For instance, it is displayed with presetting number 6 in the case of 640 × 480 dot, HS: 37.861kHz, Vsync: 72.809 Hz an example). Please note that using out of the preset timings may cause wrong magnification ratio, unfitness of control functions or other improper display.

Note 3. The display color scale may be different between Sync on Green Input and others.

CONTROL FUNCTIONS

 EXPANSION FUNCTION

Expansion mode is a function to expand the screen size in different resolutions. For example, VGA signal has 640 × 480 pixels. But, if the display data can be expanded to 1.6 times vertically and horizontally, VGA screen image can be displayed fully on the screen of XGA resolution.

This module automatically recognizes the timing shown in "**PRESET TIMING**" as an expansion mode.

Please adopt this mode after evaluating display quality because the appearance in expansion mode may become bad in some cases.

The followings show display magnifications for each mode.

Input display	Number of pixels	Magnification	
		Vertical	Horizontal
XGA	1024 × 768	1.0	1.0
SVGA	800 × 600	1.25	1.25
VGA	640 × 480	1.6	1.6
VGA text	720 × 400	1.92 / 1.6 hiearchical / toggle	1.42
MAC	832 × 624	1.2	1.2

DDC FUNCTION

This function is corresponding to VESA DDC™ and EDID™ (Structure Version 1).

Follow the specifications of the IC when you write data. Then VCLK should be fixed on "H."

Please write a data into necessary addresses in advance when you use this function. Data "55H" in address "00H" and "FFH" in other address are already programmed when shipping. The input equivalent circuit diagram is as follow.

EDID: Extended Display Identification Data

<Internal circuit diagram>

Vsync ———————————— VCLK

DDCCLK ———————————— SCL

DDCDAT ———————————— SDA

3	Clock	H. Size	Horizontal display period adjust
		Clock Phase	CLK-phase adjust
4	Position	H. Position	Horizontal position adjust
		V. Position	Vertical position adjust
5	Contrast	W, R, G, B	White-level of video signals synchronous color and each color control
		W	White-level of video signal synchronous color control
6	Color Level	W, R, G, B	Color-level of video signals synchronous color and each color control
		W	Color-level of video signal synchronous color control
7	Information		Video signal information Display multi-scan function, Hsync and Vsync frequency
8	OSD Position		OSD position adjust The display position of OSD can be moved.
9	Config		Sync on Green signal. Response or non-response to Sync on Green signal is selected. When non-response is selected by **INITIAL VALUE CHANGE FUNCTIONS**, config is not displayed.
10	All Reset		Reset to initial value. The values in No. 1 to No. 6, No. 8 and No. 9 are returned to the initial values.

In order to achieve the best picture quality, the above functions should be adjusted by setting SEL, UP, DOWN, LEFT, RIGHT, RESET and EXIT signals. Each adjusted value is memorized as soon as SEL is selected or time out mode is valid and the memorized values are not affected even if the power is switched off. But the selected value is not memorized in case that a selected mode is changed to another one before time out or power is turned off before time out.

Note 1: The value of the selected signals by UP and DOWN key is continuously incremented if the input signal is held for more than approx. one second.

Note 2: RESET signals initializes the value selected by SEL key. All reset function initializes all the values adjusted before.

Note 3: No key input for more than five seconds shall be regarded as "Time out".

Note 4: EXIT is valid when connected to GND for more than approx. two seconds.

INITIAL VALUE CHANGE FUNCTIONS

Initial value, OSD items, etc. can be changed.

The changed initial value becomes initial value in each preset timing, and is applicable when it is reset (including All Reset).

- How to transpose to initial value change mode.
  Hierarchical type : Connect SET and UP to GND at the same time when OSD function is in "information" mode.
  Toggle type : Connect SEL to GND while SEL is connected to GND when OSD function is in "All Reset" mode.

- Operation
  SEL, UP, DOWN, and EXIT

- How to return to normal mode
  Connect EXIT to GND or turn off Power supply when OSD is closed.
  Both LEDON and LEDOFF become "H" when this mode is operating.

No.	Form		Function items
1	Compatible		It becomes valid when Toggle menu type is selected only. YES : Sync on Green The initial value of contrast (RGB synchronous) becomes 128. NO : No Sync on Green The initial value of contrast (RGB synchronous) becomes 100. The NEC factory value: NO.
2	Brightness		The maximum value of brightness of backlight can be changed. Initial value: 100
3	Color Level		The initial value of color level can be changed. Initial value: 128
4	Contrast		The initial value of contrast can be changed. Initial value: 128 (When NO is selected by Compatible in Toggle menu type, the initial value of RGB synchronous only is 100. As for RGB synchronous, this clause setup value becomes valid as the Initial value regardless of the selections state of Compatible.)
5	LCD Data	Mode	No. of **PRESET TIMINGS** is displayed.
		HSE	The initial value of the double value can be changed.
		Delay	The value of the CLK delay can be changed. (Initial value can not be changed.) Initial value: 0
		VD	The initial value of the up-down position of the display position can be changed.
		HD	The initial value of the left-right position of the display position can be changed.
		Auto Adjust	Auto adjust
		Par. Delay	The compensation value of Delay of the auto adjust can be changed. Valid range: 0 to 255
		Par. HD	The compensation value of horizontal position of the auto adjust can be changed. Valid range: 0 to 127

No.	Form		Function items
5	LCD Data	LCD Reset	The values in No. 5 LCD Data are returned to the NEC factory values.

6	Sel Data	S – Lvl Sel	The adjustment that RGB is independent can be made impossible by the adjustment of the Color level. In this case, the adjustment item that RGB is independent is not displayed on the menu screen.
			    ON : Independent adjustment is available.
			    OFF : Independent adjustment is impossible
			  Initial value: ON.

		S – Cnt Sel	The adjustment that RGB is independent can be made impossible by the adjustment of the Color level. In this case, the adjustment item that RGB is independent is not displayed on the menu screen.
			    ON : Independent adjustment is available.
			    OFF : Independent adjustment is impossible
			  Initial value: ON.

		SOG Sel	Select or non-select of Sync on Green and display or non-display of select menu are selected. When non-display selected, Config is not displayed.
			    • FUNC (Y: For Sync on Green select)
			              (N: For Sync on Green non-select)
			    • MENU (Y: Select menu display.)
			              (N: Select menu non-display.)
			  Initial value: Y/N
			  * It becomes effective only when the Hierarchical menu type is selected. But it becomes invalid when Toggle menu type is selected.

		MENU Sel	B (blue) or S (transparency) can be selected for the Background Color of the OSD menu. Initial value: B
		Button Sel	4 (SEL, UP, DOWN and EXIT) or 7 (SEL, UP, DPWN, RIGHT, LEFT, EXIT and RESET) number of adjust switch are selected. Initial value: 7

		PSOSD Sel	Display or no display for Power Save OSD can be selected.
			(For detail, see **INFORMARION DISPLAY BY OSD**)
			                ON: Display OFF: No display
			  Initial value: OFF

7	Information		Input signal information is displayed.
8	OSD Position		The initial value of OSD display position can be changed. C: Center UL: Upper left UR: Upper right DL: Down left DR: Down right Initial value: C
9	Used Time		Use time in normal and Power save state is displayed. Use time is recorded in every five minutes. But it is not recorded when Power supply is cut off within five minutes.
10	Full Reset		All value is returned to NEC factory value. It takes about seven seconds.

* The value of No.5 LCD Data are memorized in every Preset timing.

* Selected adjust item is displayed with OSD.

* Data except Auto Adjust of 5. LCD Data are saved at the moment when it was returned in the extreme upper menu. But it is not kept when the power supply is cut off halfway.

* All adjust value is returned to the NEC factory value when menu type is changed.

* Evaluate compensation value of Par. Delay and Par. HD of No.5 LCD Data, and be decided.

INFORMARION DISPLAY BY OSD

1. Power save : Frequency of horizontal, vertical synchronous signal is displayed for four seconds at the time of the Power Save mode switchover.
```
┌─────────────────────────┐
│                         │
│      Power Save         │
│                         │
│    Hf   0.0 kHz         │
│    Vf   0.0 kHz         │
│                         │
└─────────────────────────┘
```

* It is displayed when Horizontal synchronous signal frequency (Hf) and vertical synchronous signal frequency (Vf) are the following.

(1) Hf < 10 KHz
(2) Vf < 40 Hz
(3) (1) and (2)

* It is not displayed when "Power Save OSD no display" form is selected with **INITIAL VALUE CHANGE FUNCTIONS** - 6. Sel Data, PSOSD Sel -.

2. Out of Range : Each frequency is displayed for four seconds when the Horizontal and Vertical synchronous signal outside the corresponding range is inputted.
```
┌─────────────────────────┐
│                         │
│      Out of Range       │
│                         │
│    Hf   64.0 kHz        │
│    Vf   60.0 kHz        │
│                         │
└─────────────────────────┘
```

* It is displayed when Horizontal synchronous signal frequency (Hf) and vertical synchronous signal frequency (Vf) are the following.

(1) $10 \text{ KHz} \leq Hf < 23 \text{ KHz}$ or $61.5 \text{ KHz} < Hf$
(2) $40 \text{ Hz} \leq Vf < 50 \text{ Hz}$ or $200 \text{ Hz} < Vf$
(3) (1) and (2)

But it is not displayed when either Hf or Vf is power save mode.

* Display or no display for Out of Range can not be selected.

3. Disable : It is displayed for four seconds that the switch for adjust is disable.

```
┌─────────────────────────┐
│                         │
│         Key             │

OPTICAL CHARACTERISTICS

(Ta = 25°C, V$_{DD}$ = 12 V, V$_{DD}$B = 12 V, **Note 1**)

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Contrast ratio	CR	θR = 0°, θL = 0°, θD = 0°, White/Black, at center	80	150	–	–	**Note 2**
Luminance	Lvmax	White, at center	150	200	–	cd/m^2	**Note 3**
Luminance uniformity	–	White	–	–	1.30	–	**Note 4**

Reference data

(Ta = 25°C, V$_{DD}$ = 12 V, V$_{DD}$B = 12 V, **Note 1**)

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Contrast ratio	CR	Best contrast angle θR = 0°, θL = 0°, θD = 5° White/Black, at center	–	300	–		**Note 2**
Color gamut	C	θR = 0°, θL = 0°, θU = 0°, θD = 0° at center, to NTSC	35	40	–	%	–
Viewing angle range	θR	CR > 10, θU = 0°, θD = 0° White/Black, at center	70	85	–	deg.	**Note 4**
	θL		70	85	–	deg.	
	θU	CR > 10, θR = 0°, θL = 0° White/Black, at center	70	85	–	deg.	
	θD		70	40	–	deg.	
Response time	Ton	Black to White	–	34	80	ms	**Note 6**
	Toff	White to Black	–	40	80		

Note 1. The luminance is measured after 20 minutes from the module works, with all pixels in "white."
The typical value is measured after luminance saturation.
Display mode: VESA XGA-75 Hz
RGB input voltage: 0.7 Vp-p
Contrast: Default

Note 2. The contrast ratio is calculated by using the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance with all pixels in "white"}}{\text{Luminance with all pixels in "black"}}$$

Note 3. The luminance is measured after 20 minutes from the module works, with all pixels in "white". The typical value is measured after luminance saturation, more than one hour after burn-in. The timing is XGA standard mode, preset No. 9.
Note 4. Luminance uniformity is calculated by using the following formula.

$$\text{Luminance uniformity} = \frac{\text{Maximum luminance}}{\text{Minimum luminance}}$$

The luminance is measured at near the five points shown below.
Note 5. Definitions of viewing angle are as follows.
Note 6. Definitions of response time is as follows.
Photo-detector output signal is measured when the luminance changes "black" to "white" or "white" to "black".

NEC
RELIABILITY TEST

Test item	Test condition	Judgment
High temperature/humidity operation	50 ±2°C, 85% relative humidity 240 hours, Display data is black.	**Note 1**
Heat cycle (operation)	<1> 0°C ±3°C ⋯ 1 hour 55°C ±3°C ⋯ 1 hour <2> 50 cycles, 4 hours/cycle <3> Display data is black.	**Note 1**
Thermal shock (non-operation)	<1> −20°C ±3°C ⋯ 30 minutes 60°C ±3°C ⋯ 30 minutes <2> 100 cycles <3> Temperature transition time is within 5 minutes.	**Note 1**
Vibration (non-operation)	<1> 5-100 Hz, 19.6 m/s² (2G) 1 minute/cycle, X, Y, Z direction <2> 50 times each direction	**Notes 1, 2**
Mechanical shock (non-operation)	<1> 294 m/s² (30G), 11 ms X, Y, Z direction <2> 3 times each direction	**Notes 1, 2**
ESD (operation)	150 pF, 150 Ω, ±10 KV 9 places on a panel **Note 3** 10 times each place at one-second intervals	**Note 1**
Dust (operation)	15 kinds of dust (JIS-Z 8901) Hourly 15 seconds stir, 8 times repeat	**Note 1**

Notes 1. Display function is checked by the same condition as LCD module out-going inspection.
2. Physical damage.
3. Discharge points are shown in the figure.
GENERAL CAUTIONS

Because next figures and sentences are very important, please understand these contents as follows.

⚠ **CAUTION**	This figure is a mark that you will get hurt and/or the module will have damages when you make a mistake to operate.

⚡	This figure is a mark that you will get an electric shock when you make a mistake to operate.
✋	This figure is a mark that you will get hurt when you make a mistake to operate.

⚠ **CAUTION**

⚡	Do not touch an inverter - - on which is stuck a caution label - - while the LCD module is under the operation, because of dangerous high voltage.

(1) Caution when taking out the module a Pick the pouch only, in taking out module from a carrier box.

(2) Cautions for handling the module
   a) As the electrostatic discharges may break the LCD module, handle the LCD module with care against electrostaic discharges.
   b) ✋ As the LCD panel and backlight element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
   c) As the surface of polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
   d) Do not pull the interface connectors in or out while the LCD module is operating.
   e) Put the module display side down on a flat horizontal plane.
   f) Handle connectors and cables with care.
   g) When the module is operating, do not lose CLK, HS or Vsync signal. If any one of these signals is lost, the LCD panel would be damaged.
   h) The torque to mounting screw should never exceed 0.392 N·m (4 kgf·cm).

(3) Cautions for the atmosphere
   a) Dew drop atmosphere should be avoided.
   b) Do not store and/or operate the LCD module in a high temperature and/or high humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
   c) This module uses cold cathod fluorescent lamps. Therefore, the life of lamps becomes short if the module is operated under the low temperature environment.
   d) Do not operate the LCD module in a high magnetic field.

(4) Caution for the module characteristics
   a) Do not apply the fixed pattern for a long time to the LCD module. Applying fixed pattern for a long time may cause image sticking.

(5) Other cautions

    a) Do not disassemble and/or reassemble LCD module.

    b) Do not readjust any variable resistors or switches in the module.

    c) When returning the module for repair or etc., please pack the module properly to avoid any damages. We recommend using the original shipping packages.

Liquid Crystal Display has the following specific characteristics. There are not defects nor malfunctions.

The display condition of LCD module may be affected by the ambient temperature.
The LCD module has cold cathode tube for backlight. Optical characteristics, like luminance or uniformity, will change during time.

Uneven brightness and/or small spots may be noticed depending on different display patterns.

OUTLINE DRAWINGS

Front View (Unit in mm)
Rear View (Unit in mm)

· The torque for mounting screw should never exceed 0.392 N · m (4 kg · cm).
· Not shown tolerance of the dimension is ±0.5 mm.
