Note 1  $T_a \leq 40^\circ\text{C}$  : 85%RH max.

$T_a > 40^\circ\text{C}$  : Absolute humidity must be lower than the humidity of 85%RH at 40°C.

Note 2  $T_a$  at -20°C ----- <48h, at 60°C ----- <168h

Note 3 Background color changes slightly depending on ambient temperature.  
This phenomenon is reversible.

Note 4 5Hz~100Hz (Except resonance frequency)

Note 5 This module should be operated normally after finish the test.

Note 6 When LCM is operated at 5°C, the life time of CFL will be reduced.  
Need to make sure of value of IL and characteristics of inverter.  
Also the response time at 5°C will be slower.

Starting discharge Voltage	VS (Note 2)	(1500)	-	-	Vrms	Ta=5°C

- (Note 1) Please design your lamp driving circuit (inverter) according to the above specifications, and inform Hitachi of it.
- (Note 2) Starting discharge voltage is increased when LCM is operating at lower temperature. Please check the characteristics of your inverter before applying to your set.
- (Note 3) Average life time of CFL will be decreased when LCM is operating at lower temperature.
- (Note 4) Under lower driving frequency of an inverter, a certain backlight system (CFL & CFL reflection sheet) may generate a sound noise. Before designing the inverter, please consider the driving frequency and the noise.
- (Note 5) When ICFL is used over 5.5mA, it may cause uneven contrast near CFL location, due to heat dispersion from CFL.

(Note 1) Please keep the specified sequence because wrong sequence may cause permanent damage to the LCD panel.

(Note 2) Hitachi recommends you to use  $\overline{\text{DISP}\bullet\text{OFF}}$  function.  
Display quality may deteriorate if you don't use  $\overline{\text{DISP}\bullet\text{OFF}}$  function.

(Note 3)  $1.2 \leq V_{\text{con}} \leq 2.4\text{V}$   
Vcon voltage should be set up to adjusted voltage before  $\overline{\text{DISP}\bullet\text{OFF}}$  signal arises.  
Otherwise, when  $\overline{\text{DISP}\bullet\text{OFF}}$  signal arises, adjusted contrast image may not be generated.

(Note 4) Please keep the specified sequence of  $\overline{\text{DISP}\bullet\text{OFF}}$  signal because if the tVH is short enough, LCD panel may not be restarted.

## 10. APPEARANCE STANDARD

### 10.1 APPEARANCE INSPECTION CONDITION

Visual inspection should be done under the following condition.

- (1) The inspection should be done in a dark room.
- (2) The CFL should be lighted with the prescribed inverter.
- (3) The distance between eyes of an inspector and the LCD Module is 25cm.
- (4) The viewing zone is shown in the figure.

Viewing angle  $\leq 25^\circ$

### 10.2 DEFINITION OF ZONE

A zone : The dots area specified at page 9-1/1 of this document.

B zone : The effective display area specified at page 9-1/1 of this document.

C zone : Area between the window of bezel line and the effective display area (B zone) line specified at page 9-1/1 of this document.

## 11. PRECAUTION IN DESIGN

### 11.1 MOUNTING PRECAUTION

Please mount the LCD Module using mounting holes arranged in 4 corners, and please pay attention to the follow ings.

Example of mounting

Location of spacers

Unit : mm  
Scale : NTS

- (1) To prevent the module cover from being pressed, the distance between the module and the fitting plate, which means the length of the spacers, should be shorter than 1.0mm.
- (2) We recommend you to use protective spacers in order to protect the module from any kinds of shocks to your set.
- (3) There are some parts (CFL, LSI, etc) on edge of our module. Please be careful with handling when you assemble (without any stress).
- (4) When you insert the connector to our module, please be careful with inserting it without slant.

(5) We recommend you to use the spacer in order to prevent coming off the suitable connector.

## 11.2 PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGE

As this module contains C-MOS LSIs, it is not strong against electrostatic discharge. Make certain that the operator's body is connected to the ground through a list band etc. And don't touch I/F pins directly.

## 11.3 POWER ON SEQUENCE

Input signals should not be applied to LCD module before power supply voltage is applied and reaches to specified voltage ( $3.3 \pm 0.15V$ ).

If the above sequence is not kept, C-MOS LSIs of LCD module may be damaged due to latch up phenomenon.

#### 11.4 HANDLING PRECAUTIONS

- (1) Since the polarizer on the top, and the aluminum plate on the bottom tend to be easily damaged, they should be handled with full care so as not to get them touched, pushed or rubbed by a piece on glass, tweezers and anything else which are harder than a pencil lead 3H.
- (2) As the adhesives used for adhering upper/lower polarizers and aluminum plate are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, toluene, ethanol and isopropyl alcohol. The following solvents are recommended for use : Normal hexane  
Please contact us when it is necessary for you to use chemicals other than the above.
- (3) Lightly wipe to clean the dirty surface with absorbent cotton or other soft material like chamois, soaked in the recommended chemicals without scrubbing it hardly.  
To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.
- (4) Immediately wipe off saliva or water drop attached on the display area because it may cause deformation or faded color.
- (5) Foggy dew deposited on the surface may cause a damage, stain or dirt to the polarizer.  
When you need to take out the LCD module from some place at low temperature for test, etc. It is required to be warmed them up to be temperature higher than room temperature before taking them out.
- (6) Touching the display area or V/F pins with bare hands or contaminating them are prohibited, because the stain on the display area and poor insulation between terminals are often caused by being touched with bare hands.  
(Some cosmetics are detrimental to polarizers.)
- (7) In general, the glass is fragile so that it, especially on its periphery, tends to be cracked or chipped in handling. Please do not give the LCD module sharp shocks caused by falling etc.
- (8) Maximum pressure to the surface must be less than  $1.96 \times 10^4$  Pa (0.2kgf/cm<sup>2</sup>).  
And if the pressure area is less than 1cm<sup>2</sup>, maximum pressure must be less than 1.96N (0.2kgf).

### 11.5 OPERATION PRECAUTION

- (1) Using a LCM module beyond its maximum ratings may result in its permanent destruction. LCM module's should usually be used under recommended operating conditions shown in chapter 5. Exceeding any of these conditions may adversely affect its reliability.
- (2) Response time will be extremely delayed at lower temperature than the specified operating temperature range and on the other hand LCD's show dark blue color at higher temperature. However those phenomena do not mean defects of the LCD module. Those phenomena will disappear in the specified operating temperature range.
- (3) If the display area is pushed hard during operation, some display patterns will be abnormally displayed.
- (4) A slight dew depositing on terminals may cause electrochemical reaction which leads to terminal open circuit. Please operate the LCD module under the relative condition of 40°C 85%RH.

### 11.6 STORAGE

In case of storing LCD module for a long period of time (for instance, for years) for the purpose of replacement use, the following precautions necessary.

- (1) Store the LCD modules in a dark place ; do not expose them to sunlight or ultraviolet rays.
- (2) Keep the temperature between 10°C and 35°C at normal humidity.
- (3) Store the LCD modules in the container which is used for shipping from us.

### 11.7 SAFETY

- (1) The LCD modules include Cold Cathode Fluorescent Lamp (CFL). CFL contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- (2) It is recommendable to crash damaged or unnecessary LCD's into pieces and wash off liquid crystal by either of solvents such as acetone and ethanol, which should be burned up later.
- (3) When any liquid leaked out of a damaged glass cell comes in contact with your hands please wash it off well with soap and water.

### 13. PRECAUTION FOR USE

- (1) A limit sample should be provided by the both parties on an occasion when the both parties agree to its necessity.  
Judgment by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.
- (2) On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
  - (1) When a question is arisen in the specifications.
  - (2) When a new problem is arisen which is not specified in the specifications.
  - (3) When an inspection specification change or operating condition change by customer is reported to HITACHI, and some problem is arisen in the specification due to the change.
  - (4) When a new problem is arisen at the customer's operating set for sample evaluation
- (3) Regarding the treatment for maintenance and repairing, both parties will discuss it in six months later after latest delivery of this product.

The precaution that should be observed when handling LCM have been explained above.  
If any points are unclear or if you have any requests, please contact Hitachi.
