1. General Description

This specification applies to the 55 inch Color TFT-LCD Module T546HW01 V1. This LCD module has a TFT active matrix type liquid crystal panel 1920x1080 pixels, and diagonal size of 55 inch. This module supports Full HD mode (Non-interlace) with 120Hz frame rate.

Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot.

The T546HW01 V1 has been designed to apply the 10-bit 4 channel LVDS interface method. It is intended to support displays where high brightness, EBU Gamut (72% NTSC), wide viewing angle, and high color depth are very important.

The T546HW01 V1 backlight unit is using inverter.

* General Information

Items	Specification	Unit	Note

Shock (non-operation)	$\pm z$	--	50	G	3
Vibration (non-operation)		--	1.5	G	4

Note 1: Duration = 50ms

Note 2: Maximum Wet-Bulb should be $39^{\circ}C$ and no condensation. The relative humidity must not exceed 90% non-condensing at temperatures of $40^{\circ}C$ or less. At temperatures greater than $40^{\circ}C$, the wet bulb temperature must not exceed $39^{\circ}C$.

Note 3: Sine wave, 11ms, direction: $\pm x, \pm y, \pm z$ (one time each direction)

Note 4: Wave form: random, vibration level: 1.5G RMS, Bandwidth: 10--300Hz
Duration: X, Y, Z 30min (one time each direction)

Note 5: Surface temperature is measured at $50^{\circ}C$ Dry condition

3. Electrical Specification

The T546HW01 V1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input, which powers the CCFL, is typically generated by an integrate power (I/P) system.

3.1 Electrical Characteristics

Parameter		Symbol	Value			Unit	Note
			Min.	Typ.	Max		
Power Supply Input Voltage		V_{DD}	10.8	12.0	13.2	V_{DC}

	Input Low Threshold Voltage	V_{IL} (Low)	0	--	0.7	V_{DC}	
Backlight Power Consumption (ref.)		P_{BL}	--	(260)	--	Watt	2
Life Time			50000	--	--	Hours	3

Note:

1. $V_{DD}=12.0V$, $f_V=60Hz$, $f_{CLK}=81.5Mhz$, $25^\circ C$, V_{DD} duration time= $400\mu s$, test pattern: white pattern
2. The backlight power consumption shown above is tested by lamp current $I_L=9.0mA$.
3. $V_{CIM}=1.25V$

Figure: LVDS Differential Voltage

4. Measurement condition: rising time= $400\mu s$

5. Specified values are for a single lamp only which is aligned horizontally. The lifetime is defined as the time which luminance of the lamp is 50% compared to its original value.
[Operating condition: Continuous operating at $T_a = 25\pm 2^\circ C$]
6. The performance of the Lamp in LCD panel, for example life time or brightness, is extremely influenced by the characteristics of balanced board and I/P board. All the parameters should be carefully designed as not to produce too much leakage current from high-voltage output. While you design or order the balance board, please make sure unwanted lighting caused by the mismatch of the lamp and the balanced board (no lighting, flicker, etc) never occurs. After confirmation, the LCD panel should be operated in the same condition as installed in your instrument
7. Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to conducting tape, TFT-LCD Module have a low luminance and the inverter has abnormal action because leakage current occurs between lamp wire and conducting tape.
8. The relative humidity must not exceed 80% non-condensing at temperatures of $40^\circ C$ or less. At temperatures greater than $40^\circ C$, the wet bulb temperature must not exceed $39^\circ C$. When operate at low temperatures, the brightness of CCFL will drop and the life time of CCFL will be reduced.

3.2 Interface Connections

LCD connector: 187059-51221 (Manufactured by P-TWO); 187060-41221 (Manufactured by P-TWO)

Note 1: All GND (ground) pins should be connected together and should also be connected to the LCD's metal frame.

Note 2: All V_{DD} (power input) pins should be connected together.

Note 3: All NC (no connection) pins should be open without voltage input.

3.5 Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 10 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Note:

- (1) T4=0 : concern for residual pattern before BLU turn off.
- (2) T6 : voltage of VDD must decay smoothly after power-off. (customer system decide this value)

Apply the lamp voltage within the LCD operating range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal.

Caution: The above on/off sequence should be applied to avoid abnormal function in the display. In case of handling, make sure to turn off the power when you plug the cable into the input connector or pull the cable out of the connector.

Note 1 : Dimming ratio= 100% (MAX) (Ta=25±5°C , Turn on for 45minutes)

Note 2 : IF External PWM function includes 5% dimming function. Judge condition is shown below:

- 1.) Backlight module must be lighted ON normally.
- 2.) All protection function must operate normally.
- 3.) Uniformity and flicker could NOT be guaranteed!

When External or Internal PWM working Duty ratio is above 20%, all function condition MUST be in SPEC.

4)In Product SPEC Description, Inverter will NOT guarantee optical performance when Dimming ratio under 20%; and NOT guarantee Protection function when Dimming ratio under 5%.

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 60 minutes in a dark environment at 25°C. The values specified are at an approximate distance 500mm from the LCD surface at a viewing angle of φ and θ equal to 0°.

y axis, down ($\varphi=270^\circ$)	θ_d	--	89	--	degree	5

Note:

1. Contrast Ratio (CR) is defined mathematically as:

$$\text{Contrast Ratio (CR)} = \frac{\text{Brightness of the "white" state}}{\text{Brightness of the "black" state}}$$

2. Surface Luminance is luminance value at point 5 with 100% dimming across the LCD surface 50cm from the surface with all pixels displaying white. For more information see Fig. 4-2. When lamp current $I_L=7.6\text{mA}$, $L_{WH}=L_{on5}$, where L_{on5} is the luminance with all pixels displaying white at center 5 location.

Fig.4-2 Optical measurement point

3. The variation in surface luminance, $\delta_{\text{WHITE}(9P)}$ is defined under brightness of $I_L=9\text{mA}$ as:

$$\delta_{\text{WHITE}(9P)} = \text{Maximum}(L_{on1}, L_{on2}, \dots, L_{on9}) / \text{Minimum}(L_{on1}, L_{on2}, \dots, L_{on9})$$

4. Response time T_γ is the average time required for display transition by switching the input signal for five luminance ratio (0%, 25%, 50%, 75%, 100% brightness matrix) and is based on $f_v=60\text{Hz}$ to optimize.

	0%	25%	50%	75%	100%
0%		t:0%-25%	t:0%-50%	t:0%-75%	t:0%-100%
25%	t:25%-0%		t:25%-50%	t:25%-75%	t:25%-100%
50%	t:50%-0%	t:50%-25%		t:50%-75%	t:50%-100%
75%	t:75%-0%	t:75%-25%	t:75%-50%		t:75%-100%
100%	t:100%-0%	t:100%-25%	t:100%-50%	t:100%-75%	

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal (or x-axis) and the vertical (or y-axis) with respect to the z-axis which is normal to the LCD surface. For more information see Fig. 4-4.

7-3. Green Mark Description

- (1) For Pb Free products, AUO will add  for identification.
- (2) For RoHS compatible products, AUO will add RoHS for identification.

Note. The Green Mark will be present only when the green documents have been ready by AUO Internal Green Team. (The definition of green design follows the AUO green design checklist.)

8. Packing

Packing Instruction

Carton dimension= 1355mm*560mm*830mm

Pallet information

By air cargo: (2 x 1) x 1 layers, one pallet put 2 boxes, total 12 pcs module.

Dimension: 1390mm*1150mm*962mm

By sea: (2 x 1) x 2 layers, one pallet put 2 boxes, stack 2 layers, total 24 pcs module.

Dimension: 1390 x 1150 x 1924mm

Pallet dimension: 1390mm*1150mm*132mm (T55)

	Item	Specification			Packing Remark
		Qty.	Dimension	Weight (kg)	
1	Packing BOX	6pcs/box	1355(L)mm*560(W)mm*830(H)mm	133	
2	Pallet	1	1390(L)mm*1150(W)mm*132(H)mm	20	
3	Boxes per Pallet	2 boxes/Pallet

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

8-1 MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged on back side of panel
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

8-2 OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage:
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.
- (7) The device listed in the product specification sheets was designed and manufactured for TV application.

8-3 ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

8-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

8-5 STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

8-6 HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the Bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane
